PERMIT-TO-WORK TAKEN TO THE NEXT LEVEL

Frequently, standard procedures for secure plant system shutdowns are accompanied by documents referred to as work permits.

Introducing the B810 Permit Redbox™, designed to store machinery and system locks while seamlessly integrating essential documents. This innovation fuses meticulous system security with permit protection within a spacious, lockable viewing window, ensuring heightened security and transparency during maintenance task.

Technologies

- Sturdy box made of powder-coated sheet steel
- Large, lockable front pane for holding permits to work (A4 format)
- With 20 receptacles for personal padlocks plus 3 additional ones for authorized persons
- Large storage area with hook rails for up to 24 machine locks
- Has a carrying handle for mobile deployment
- Accompanied by a wall mount for stationary use of the box
- Quick-release button inside for optionally attaching the box to the wall mount
- Cutouts all around to let in more light and provide a better view inside
- Has a deposit slot on the side for keys including key chain

Use and application

- For organization of group lockout processes in combination with permit-to-work systems
- Integration of the permit to work to better inform the persons involved

B810 Permit Redbox™ incl. wall bracket

Seite 2 von 2

-
- Increased security through locking up the permit to work until all work has been completed
 - Flexible use as a mobile box or anchored on the accompanying wall mount
 - Ideal also for safeguarding the machinists directly at the machine
