Gate valve lockout V165

LOCKS MANY HAND WHEELS

The V165 gate valve lockout for securing closed flow valves increases occupational safety in industry and trade.

If the supply of liquids or gases to systems and machines is interrupted by turning a hand wheel because of necessary maintenance work, misunderstandings and accidents can occur in everyday work. The V165 gate valve lockout helps to prevent this. The hand wheel is enclosed by the lock and additionally secured with a padlock. Thus the hand wheel is locked (lockout) and at the same time marked as intentionally turned closed (tagout).

Technologies

- Plastic trays for plugging together

Operation and use

- For securing valves against unintentionally restarting during maintenance
- Locks flow valves
- Secures the hand wheel by enclosing it
- For hand wheels up to 165 mm in diameter
- With multi-level adjustment option

Technical data - Gate valve lockout V165

Depth	80 mm
Inner Diameter	165 mm
Inner height	8 mm
Locking Points	3
Weight [g]	260 g
Width	250 mm
colour	red
EAN	4003318974922
