Visor narrow clear TimeShifter M/L

AERODYNAMICS THAT ADAPT

The TimeShifter is the first time trial helmet with three interchangeable visors - Narrow, Wide and Cut.

Narrow and Wide change the effective width and shape of the helmet and thus make a targeted contribution to optimising the interaction between helmet, rider and airflow. Wind tunnel tests with professional athletes show that the choice of visor can enable decisive marginal gains depending on shoulder width and cockpit setup. While the Narrow visor offers particular advantages with a compact arm position, the Wide visor can optimise aerodynamics with a wider upper body or more open setups.

The concept enables aerodynamic fine-tuning - without compromising on field of vision or ventilation. Narrow and Wide are available in clear, tinted and mirrored designs.

A Cut visor is also available, which has been specially developed for extreme aero positions. It minimises interference in very tight cockpit setups and supports maximum integration in very low head and arm positions during time trials. The Cut visor is available in clear and mirrored versions. All visors are manufactured in Italy.

Technologies

- Visor shapes: available in Wide, Narrow and Cut versions – tailored to different time trial positions and individual aerodynamic set-ups in TT and tri use
- Development goal: aerodynamic fine-tuning to the riding position without compromising visibility, cooling or set-up integration
- Marginal gains: minimal, measurable reduction in air resistance possible – depending on rider position, head position and crosswind conditions
- Visor tints: Narrow and Wide each available in clear, tinted or mirrored – Cut Visor available in clear or mirrored
- Magnet attachment: visor can be quickly and securely attached to or removed from the helmet thanks to magnetic mounts
- Clear all-round vision: large visor geometry enables a clear view in all directions – regardless of head position or

riding position
- Seamless helmet integration: visor fits flush with the helmet shape and reduces the penetration of wind, rain, dust and insects
- Flexible use: visor is not permanently fitted and can be attached, removed, replaced or retrofitted at any time
- Robust material: made of durable polycarbonate for high stability and low weight
- Fog-free: less fogging of the visor for clear vision in changing weather and competition conditions
- Made in Italy: manufactured in Italy

Operation and use

- Narrow visor: optimised for compact setups, narrow shoulder profiles or narrow arm positions
- Wide visor: optimised for riders with broader shoulders or a more open arm position
- Cut visor: developed to minimise interference in very tight cockpit setups – for example, with very low head and high arm positions in time trials

Technical data - Visor narrow clear TimeShifter M/L

Size	M/L
Weight [g]	85 g
design color	clear
EAN	4043813004366
