

GATE VALVE LOCKOUTS: SMALL TO LARGE

Our five gate valve lockouts cover all common valve sizes.

The ABUS gate valve lockouts completely enclose the hand wheel and are secured with a padlock. In this way, they clearly signal that the valve is closed and should not be actuated. The risk of misunderstandings and resulting accidents at work is thus eliminated to the greatest possible extent.

Technologies

- High-quality polypropylene: long-lasting, robust and non-conductive
- Five sizes: Valves from 1" to 13"
- Holds 1 padlock with up to 9 mm shackle diameter
- Unique, predetermined breaking point at the top for valves with thread
- Stickers in various languages included

Operation and use

- Block access to gate valves during maintenance

Variants

- V303: 1" - 2 1/2"
- V305: 2 1/2" - 5"
- V307: 5" - 6 1/2"
- V310: 6 1/2" - 10"
- V313: 10" - 13"
