

FOR TRAVELING TO THE USA

Our 147TSA luggage lock is a good choice for protecting your luggage when you want to fly to the United States.

The Transportation Security Administration (TSA) opens suitcases and other luggage, among other things, if they can't see exactly what something is during screening at the airport security checkpoint. TSA employees have master keys that fit TSA locks. This way, your suitcase lock will not be damaged. And the case can be locked normally over and over again. Conventional padlocks are broken by Customs officials. They are allowed to do so - only then you won't have a lock to protect your suitcase from casual thieves. The lock with plastic body and cable bracket is locked with a three-digit numerical code. It has an indicator that shows whether the lock has been opened by TSA key.

Technologies

- Lock body made from plastic
- Shackle diameter 3 mm
- Individually resettable 3-digit code
- Visible red indicator at shackle: lock was opened by TSA. To reset red indicator open lock and turn shackle by 360°
- To reset red indicator open lock and turn shackle by 360°

Operation and use

- To secure valuables/goods of lower value or at a low risk of theft
- Suitable e.g. to secure luggage
- Ideal for journeys to the USA: the luggage can be opened/relocked by the US security authorities without damaging the lock

Variants

- Colour: black
-
