

FIRMLY ANCHORED

Our 728 and 729 KeyGarages ensure that fire departments, security services, and other emergency personnel have access to keys to the building in an emergency.

For large rental properties, businesses, or other real estate, it is typically necessary to ensure that fire departments, monitoring companies, and other security companies have access to keys so they can get into the building. The two KeyGarages 728 and 729 offer a good solution for making keys accessible in such cases. They are firmly embedded into the concrete of the wall near house and front doors, and their compact, tubular dimensions provide reliable protection against break-ins. The KeyGarages™ 728 and 729 are made of high-quality stainless steel. A small ring at the back of the cylinder insert serves to hold stored keys in place. The two KeyGarages can be used indoors and outdoors.
