System Z14

Multiple paracentric profile with internal key stopper

MADE IN GERMANY

System Z14

Multiple paracentric profile with internal key stopper

All images with optional drill protection

Internal key stopper

- The special blocking slot offers an additional technical protection against copying
- If the blocking slot is missing the key cannot be inserted completely into the cylinder core and cannot open the cylinder

Bent precision shape

- The bent precision shape offers an effective picking resistance according to DIN norms
- Comfortable handling because of the solid key
- The reinforced key leads to a higher stability

General advantages

- Complex locking systems because of a 14 mm core diameter
- Can be combined with systems of a higher security level (XZ14)
- Legal protection against copying (patent)
- Emergency feature available from length 26,5/26,5 mm onwards
- Production according to DIN EN 1303, DIN 18252 and ISO 9001:2008
- 5 or 6 pins per cylinder side

Security Tech Germany

International product range

America locks in a different way than Germany. Asia locks differently than Europe. When it comes to the variety of products we take each challenge and answer it with our international solutions "Made in Germany".

Special features for your individual locking system

Drill and pull protection

Different options available

Pre-snap

For the controlled breaking of the cylinder at a predetermined breaking point

Special numbering

For the individual marking of the cylinder and key

Electronic locking system

Can be combined with electronic locking systems of the ABUS group

Emergency feature

Locking of the cylinder from one side even when a key is inserted in the other side

Emergency feature with free-wheel cam

For mortise locks with a panic feature and multi-point locking

Salt water resistant cylinders

Corrosion resistance according to DIN 50 021-SS

Further special features

Of course, other special features are available as well

Security Tech Germany

Combination with system XZ14 (optional) For a higher protection against illegal opening

All images with optional drill protection

Ideal complement for higher security demands

- System XZ14 = System Z14 + passive lateral locking elements (X14)
- The second locking row (XZ14) extends the authority request and makes manipulation more complicated
- The system XZ14 can be used in the whole locking system or only for sections that demand a higher security level

The Plus of security

- An additional row of pins makes intelligent manipulation attempts more difficult
- The dimples complicate illegal copying of keys
- Up to 10 locking elements per cylinder side for an optimal protection against opening attempts

Investment security

- An additional row of pins makes even more complex locking systems and extensions possible
- The option of a later extension offers more extensive adjustment possibilities, for example when the authorization structure changes
- A later extension guarantees a long use of a locking system, for example when a key is lost
