Work safely, look strong – custom-printed industrial safety helmets from ABUS

Wetter/Ruhr – November 2025 – Whether it's a company logo, name, or department, ABUS now offers customized and personalized construction and industrial climbing helmets directly from the manufacturer. Thanks to in-house production in Germany, the helmets are available in six modern colors, with short delivery times and minimum order quantities starting at 24 units.

Safety helmets are much more than just mandatory equipment in everyday working life – they stand for safety, responsibility, and clear identification. Temporary markings such as faded company logos, crooked stickers, or handwritten signatures are not a reliable solution and appear unprofessional. Safety expert ABUS therefore focuses on safety helmets with a distinctive design in its PPE range and shows how permanent, professional labeling can be reliably implemented.

Helmet customization according to customer requirements

At its main factory in Volmarstein, where the iconic “Diskus” padlock has been produced for decades, things are now really heating up: with its own production and finishing facility for Spector climbing helmets and Scator construction helmets from the ABUS PPE range. The helmet design is as individual as each company itself. In addition to the helmet color and print, the placement can also be chosen – at the front, on the side, or in several positions.

Sebastian Rothe, Head of Safety at ABUS, says: "When we talked to selected customers about the first "golden samples" of our helmets, the question of whether we could also print logos or other things directly onto the helmet came up quite quickly. There are already others who do this – but they are not the manufacturers themselves. And that usually means that it takes time and is only possible for orders above a certain quantity. As we are a manufacturer and can offer everything from a single source, we can do this very quickly: for orders of 24 helmets or more and quantities of less than 100, they are printed and on their way to the customer within 7 working days!"

Industrial safety helmets from ABUS – two product lines, also available as E versions

ABUS currently offers two different helmet series. The models in the Spector series combine design, construction, and material selection to ensure maximum comfort, as is also familiar from ABUS bicycle helmets. The Spector models are available as ventilated industrial climbing helmets for working at heights (in accordance with EN 12492) and in a closed version as electrician's helmets (EN 50365). The helmets in the Scator series are industrial safety helmets and therefore an indispensable companion on construction sites and in industry. The Scator is also available in a non-ventilated version as a safety helmet for electricians.

Regardless of the specific standards, all helmets in the ABUS PPE range comply with the EN 397 standard for industrial safety helmets. Both the Spector and the Scator can be equipped with appropriate accessories according to the user's requirements, depending on the area of application. These include safety glasses, half or full visors, hearing protection, and neck protection.
