Secvest Wi Fi module

Wireless connection to the home network
The Secvest Wi-Fi module is an optional accessory for the Secvest wireless alarm system. It enables the wireless integration of the Secvest wireless alarm system into the local Wi-Fi network. A LAN cable no longer needs to run the distance between the alarm panel and the Wi-Fi router. As a result, flexible location-independent installation can be implemented. Easy integration and quick access
The Wi-Fi module is a small, high-performance module inserted into the housing of the alarm panel. The Wi-Fi module is supplied directly with power by the alarm panel. Via its very own intuitive web interface the module can be easily accessed at any time.

Technologies

• Wireless integration of the Secvest wireless alarm system into the home network
• Enables the installation of the alarm panel regardless of the location of the Wi-Fi router
• Easy integration of the Wi-Fi module in or underneath the housing of the alarm panel
• 12 V of power supplied via the alarm panel

Technical data - Secvest Wi Fi module

Backup power supply	No
Battery - type	no
Connections	Ethernet RJ-45
DC voltage supply	5 V
Dimensions	(WxHxD) 350x590x110 mm
Display	Without
Encryption	64/128/WEP encryption; WPA-PSK/WPA2-PSK, WPA/WPA2
Height	590 mm
Installation location	Fitting

Secvest Wi Fi module

Technical data - Secvest Wi Fi module

LAN network access	1
Language of instructions	DE, EN, FR, NL, DK, IT
Length	110 mm
Max. humidity	93 %
Max. operating temperature	55 °C
Min. operating temperature	-10 °C
Net weight	0,42 kg
OSD language	DE, EN
Operation	Via its own web interface
Power consumption	220 mA
Radio frequency	2.400 MHz
Radio power	100 mW
Sabotage lines	0
Sabotage monitoring	No
Width	350 mm
