

DOOR SECURITY FOR THE HOME

Vitess is precisely tailored to suit your personal requirements, providing the chance to assemble your very own customised security solution - from the special features right down to the type of cylinder and finish.

The Vitess system can be expanded at any time, giving you the flexibility to make changes at a later stage. The fact that the lock cylinders are developed and produced in Germany guarantees premium quality and a long product service life. ABUS makes it possible for a single key to be used to open your front door as well as your apartment and cellar doors, and even your letterbox. With our combination keys, you can combine mechanical and electronic lock cylinders in one key system. Plus, together with the transponder in the key cap, it is even possible to control alarm systems and third-party systems.
