

SAFELY CLOSED

Reliable door closer for doors that should not be open.

For fire doors, door closers are relevant to safety, because they must always be self-closing in accordance with regulations. But your house and flat doors can also be closed securely with this closer. The door closer is suitable for doors up to 1.10 metres wide. Its closing force is continuously adjustable via the adjusting screw and the linkage hinge. Opening the door up to 180 degrees is still possible after fitting the closer. An additional DIN plate is available for closing fire doors.
