

ROBUST AND CHILDPROOF

House and flat doors with glass inserts can be secured with this lockable door chain.

You can protect doors with glass inserts or narrow frame profiles from being entered by unauthorised third parties with this lockable chain. The hardened special chain is particularly suitable for doors with glass inserts or narrow frame profiles due to its narrow chain bracket. The chain can be securely locked with a key and then opened just a crack to always know exactly who is at the door. A childproof safety catch protects the chain from careless children's hands.

Technologies

- Hardened chain
