

Compressed air can also pose considerable danger, so pneumatic connections should be secured against unintentional use.

The P604 pneumatic lockout device takes care of this simply and reliably.

With its seven different diameters for accommodating the male parts of a wide variety of couplings, P604 offers the scope to be able to secure almost all common compressed air connections.

Technologies

- Stainless steel: robust, durable, resistant
- Seven receptacles with different diameters between 7.5 and 20 mm
- Self-explanatory: intuitive and easy to use
- With LOTO warning embossed on both sides
- For up to two padlocks with shackles up to 8 mm thick

Operation and use

- Securing pneumatic connections during maintenance work
- Secures the male piece of the compressed air coupling and thus prevents it from being inserted into the female piece
- For up to two padlocks
