

LED light JC6520 NILS Clip

Seite 1 von 2

Clipped in place and made visible

Flashing or steady light: Our LED light NILS can be flexibly attached with the Velcro fastener almost anywhere there is a loop.

Poor visibility? No matter if it's rain, snow, hail or because it's autumn, winter or dark night? Then clip LED light NILS onto your son's backpack or your daughter's rain jacket. Or to the pram when you want to take your little bundle of joy for a walk in the autumn storm. And the practical Velcro fastener not only holds, but thanks to it, NILS flexible also ensures good visibility the next day on the other favourite bag or another piece of clothing. Tip: To further increase your child's safety, attach NILS to the tab on the back of our MAX and LEON safety vests. And of course NILS is also suitable for athletes, bikers, cyclists and others who are out and about at night or in the dark and want to be as safe as possible in road traffic.

Technologies

- Continuous and flashing light function at the touch of a button
- Visibility: 150 m
