TRANSPARENT DOME FOR DOME CAMERA (IPCB74521, IPCB78521)

This replaceable transparent dome is made of robust polycarbonate and effectively protects your surveillance camera in unprotected outdoor areas from environmental influences such as UV radiation, dust or rain as well as damage or vandalism. This keeps the surveillance images from your dome cameras sharp and clear, even under difficult conditions where otherwise image quality may be impaired (e.g. sensor colour errors, scratches on the glass, reflections). The dome fits with a diameter of 110 mm on the dome cameras with art. nos. IPCB74521 and IPCB78521. It is hardly noticeable and can therefore also be used with a discreetly installed dome camera (e.g. in a suspended ceiling).

The dome is an optional accessory and can be easily and quickly replaced as a spare part if necessary.

Technical data - Transparent bubble for IPCB74521, IPCB78521

Height	64 mm
Length	110 mm
Width	110 mm
