

Visor protector Spector(-E)

Seite 1 von 1

VISOR PROTECTOR TO PREVENT SCRATCHES

In the day-to-day work of tradesmen, construction workers and fitters, safety helmets and the associated visors are subject to particular wear and tear. A visor protector can prevent the half visor from being damaged by scratches and other external influences.

The visor protector is specifically designed for protecting the half visor on Spector or Spector-E safety helmets. The polycarbonate lens is additionally attached to the helmet using a simple click system and reliably protects the accessory.

A slot in the centre is provided for attaching headlamps.

Operation and use

- Suitable for the ABUS safety helmets Spector, Spector-E in combination with the half visor
- Use cases include industry and manufacturing, building and construction, power generation and supply, agriculture and horticulture, road construction and civil engineering, forestry and wood processing

Technical data - Visor protector Spector(-E)

Size	universal
Weight	49 g
