

215 + 83/60HB100-5 EPZ without cylinder

SECURE CONTAINERS IN THE BEST POSSIBLE WAY

Tyres, complete wheels, pyrotechnics, tools and machinery are high-value goods that are stored in containers and require good security. The ConHasp GRANIT 215 is the first choice when it comes to protecting high-value assets.

The ConHasp hasp is made of hardened steel and is manufactured using a special welding process. All parts are corrosion-protected. The use of two solid bolts to fasten the container lock to the container creates a particularly robust connection. Container lock + padlock Together with the 83/60HB100-5 padlock, containers can be securely locked. As this padlock is supplied without a cylinder, it is possible to install a Euro profile half cylinder yourself and integrate the container lock into existing locking systems. Tested and approved

In combination with the 83/60HB100-5 padlock, the hasp is approved in the highest class B in accordance with VdS guideline 3503 - but only in conjunction with a VdS Home class profile cylinder. This means that the above combinations of hasp and padlock offer additional protection against attacks on the container. If, for example, the bars are cut, the container lock remains securely in position and cannot simply be removed.

In addition, the combination of container lock and padlock is tested and approved in accordance with the Swedish SSF standard.

Technologies

- Additional securing of goods in containers
- Locking of the two-part construction with 83/60HB100-5 padlock
- Made from hardened steel
- Processed using a special welding process for even greater security
- All parts protected against corrosion by special coating
- 83/60HB100-5: without cylinder
- VdS 3503 (Class B)-approved: The combination of ConHasp GRANIT™ 215/100 + 83/60HB100-5 padlock meets the

215 + 83/60HB100-5 EPZ without cylinder

Seite 2 von 2

requirements of the highest class B (in conjunction with a profile cylinder of at least class VdS Home)

- SSF 1051 (class 4)-approved

Operation and use

- Fits the most common transportation and storage containers
- Can be fitted to old and new containers
- Secure locking only in combination with a suitable padlock (here the 83/60HB100-5 Rock)

Variants

- Rock padlock: without cylinder (o.Zyl. = cylinder is available separately) and with removable shackle
- EPZ = variant can be combined with Euro profile cylinder in length 10/30
- Oval = variant can be combined with Scandinavian oval cylinder
- Conventional = variant for cylinders with conventional key
- Reversible key = variant for cylinders with practical reversible key
