Backup communicator for every situation

Power out where you are? The Smartvest Pro keeps running, thanks to its integrated emergency power supply. And when the internet at home is down? Then the Smartvest Pro mobile communication module takes over.

You probably know what it's like when your internet connection at home goes down, whether it's due to problems with the WiFi or an internet provider malfunction. Normally, a power outage means the internet connection is disrupted, too.

Need your Smartvest Pro security system to keep sending notifications without interruption? Then load a standard SIM card into the Smartvest Pro mobile communication module and insert it into your Smartvest Pro's control panel. It ensures additional security and eliminates your alarm system's reliance on internet connection via LAN or WiFi. The Smartvest Pro mobile communication module stays vigilant around the clock - so it can jump into action as soon as the internet connection is disrupted. For a comfortably secure home. For you and your family.

Technologies

- Smartvest Pro mobile communication module for alternative communication between the Smartvest Pro wireless alarm system control panel and the Smartvest Pro app
- Automatically switches on if the internet connection at home or the home network/WiFi fails
- For installing in the control panel and operating with a standard SIM card
