SECURE CONTAINERS FLEXIBLY

Containers usually contain goods with a high total value that require reliable protection - regardless of whether these are fireworks, tyres or tools. In combination with the high-quality ABUS GRANIT™ 37/55HB38 padlock, the ConHasp 205 provides security for your goods.

No screws, no drilling, no holes - the ConHasp 205 is a removable container lock for flexible use on changing containers. This is an advantage with rental containers, for example, because you can attach the lock for the duration of use and simply remove it if necessary. Mounting on the bars of the container is quick and easy: thanks to the recesses at the rear, the ConHasp 205 can be attached directly to the brackets on the container door bars. This keeps it firmly in place and effectively prevents it from being moved - even in the event of violent attacks on the container bars. Container lock + GRANIT™ 37/55HB38 To lock the containers securely, you also need a high-quality padlock such as the GRANIT™ 37/55HB38 - a lock for the highest security requirements. With its high, removable shackle and high-quality Plus cylinder to protect against tampering, it is the ideal complement to the ConHasp 205. Weather-resistant & sturdy

Manufactured from durable steel, additionally zinc-plated and finished with a black powder coating, this container lock is optimally protected against wind and weather. This makes it equally suitable for containers that are stored both indoors and outdoors.

Technologies

- Locking of the two-part construction with GRANIT™ 37/55HB38 padlock
- Recess on the rear side for fixed positioning on the container bar bracket
- Adaptable width thanks to seven hole positions for attaching the padlock
- Resistant steel
- High corrosion protection thanks to zinc plating, additionally reinforced with black powder coating
- GRANIT™ 37/55HB38: with ABUS Plus cylinder and code card, two keys included

Operation and use

ConHasp 205 + 37/55HB38 #SZP

Seite 2 von 2

-
