

SHAFTS PROTECTED

Cellar grate lock with tension rod and manipulation protection for screws.

Cellar shafts can quickly become a risk if they are not adequately secured. Protect your home with a reliable cellar grate lock. This security offers the basic protection against burglars. After assembly, the grating can usually no longer be levered open. The screws can be loosened manually and only from the inside, which still ensures an escape through the basement window. The fuse has a tension rod 345 millimetres long.

Technologies

- Screw covered from above
- Round shield plates
- Bar construction 345 mm length
- Set of 2

Operation and use

- Standard protection for grills
- Manually removable screws comply with existing emergency escape route regulations
- To be fitted in pairs
