

GET EVERYTHING

The additional door lock still allows contact with the outside.

You want secure doors and still the possibility to know who is ringing your doorbell? This additional door lock fulfils these criteria. The additional lock has a strong wall anchor by heavy-duty dowels. The strong oval bolt made of solid steel also protects your door from attempted break-ins. A hardened steel shackle ensures that you can open your door a crack when it is locked, e.g. to receive post. For even more security, the lock can also be combined with the pulling protection plate PZS70. It is operated from the outside with a key and from the inside with a turning knob.

Technologies

- Strong wall anchoring of the striking plate with heavy duty dowels
- With two alternative thumbturns on the inside
- Two backsets can be adjusted: 60 and 72 mm
- Solid oval bolt made from solid steel, locks with two turns
