

Security Tech Germany

**FOR THAT  
GOOD FEELING  
OF SECURITY**

DISCOVER THE GLOBAL BRAND FOR SECURITY.

# FOR THAT GOOD FEELING OF SECURITY

DISCOVER THE GLOBAL BRAND FOR SECURITY.

# THE SECURE FEELING OF HAVING THE RIGHT PARTNER

Since 1924, we have been working on security solutions for private homes and recreational and sporting goods. As a family-owned, German business, it is important for us to make the world a safer place. Products that ensure the security of residential, commercial, and mobile property are the pillars on which our company is built. In cooperation with the police, insurance companies, and a great many international testing institutes, we are constantly optimizing our product portfolio. Today, security is not the only important component of ABUS's product world, but also networking, comfort, and intelligence.

This can be experienced at first hand by partners and employees at the ABUS Security World at company headquarters in Wetter-Volmarstein in Germany's Ruhr region.

Everything we do is based on the Christian beliefs that underpin the corporate principle laid down by the founding family: "God's blessing gained, all is obtained." With this mindset, we aim to give people a good feeling of security.

Yesterday, today, and in the future. That's for sure.

Sincerely,  
Your ABUS Management

# EARNING THE TRUST OF OUR CUSTOMERS AND PARTNERS – SINCE 1924

ABUS is a global brand that after almost 100 years is still owned by the family that founded it. Such a history can only be written on the basis of value-oriented, forward-looking entrepreneurship. It all began in 1924 in the village of Volmarstein on the Ruhr river. In the cellar of his house, August Bremicker and his sons forged the first padlocks. From the beginning, he wanted to create products

that would protect people's lives and property. Out of "August Bremicker and Sons" arose ABUS – a name synonymous with security – and an internationally successful group of companies that generates trust with innovations for preventive security technology.

# SECURITY FROM A TO Z FROM A FULL-LINE SUPPLIER

The last thing that we want to do is reserve that good feeling of security just for people in Germany. Customers all over the world should be able to experience what it means to trust ABUS. And we provide people on every continent of the globe with tailor-made security solutions. To this end, our German production plants work hand in hand with our international partners – at 25 locations with 102 national offices. More than 3,500 employees work for ABUS worldwide. Wherever our customers need us.

**German engineering – worldwide!**  
Our experts for home and mobile security solutions are located at our company headquarters in Wetter, which is also on the Ruhr river. Our ABUS Security-Center develops surveillance cameras, video surveillance recorders, and alarm systems that are based on digital, analog, or a hybrid of both technologies. ABUS Pfaffenhain GmbH designs and manufactures high-quality locking systems. Electronic locking systems and switching equipment for burglar alarm systems are also part of the product portfolio.

● ABUS STANDORTE ● ABUS PARTNER

# ABUS – THE SYNONYM FOR SECURITY, MADE IN GERMANY

Right from the beginning in 1924 when August Bremicker and his sons first produced traditional padlocks, the course was set for an ambitious goal: to become the global brand for security. ABUS's expertise in security was and still is founded on a comprehensive product range offering fundamental security, based on mechanical technology. A range systematically extended by the "ABUS Mobile Security" program for security on the road. With the aid of modern management processes and an eye for opportunities in the growing security technology market, the company, which has a real sense of its own history, was systematically expanded. Since the takeover in 2001, ABUS Security-Center has developed rapidly in the specialist field of "electronic security": from a pure specialist supplier to a leading full-range supplier of ultramodern alarm systems and high-tech solutions for intelligent video surveillance technology. Since 2003, ABUS Pfaffenhain has been making a name for itself within the ABUS Group as a renowned supplier of high-quality locking systems for commercial property.

**ABUS August Bremicker Söhne KG**  
 ABUS August Bremicker Söhne KG is the specialist brand for preventive security technologies, with two separate corporate divisions: "Home Security" (e.g. door and window locks) and "Mobile Security" (e.g. bicycle locks and helmets, motorbike locks). ABUS KG has its head office in Wetter/Ruhr, including the long-standing production site in Hegestraße. Since 1957, the company has continuously invested in its plant in Rehe/Westerwald. Today, it stands as a guarantor for our top-quality products Made in Germany.

**ABUS AUGUST BREMICKER SÖHNE KG**

**ABUS Pfaffenhain GmbH**  
 ABUS Pfaffenhain GmbH is the leading specialist when it comes to planning and manufacturing high-quality locking systems within the ABUS Group. For more than 60 years, the company – which is located in the picturesque German state of Saxony – has been developing and manufacturing complex locking

systems that are renowned the whole world over. The made-to-measure locking systems – from systems with one key for all locks to general master key systems – are planned and manufactured for commercial and private users on the basis of their individual requirements. ABUS offers the right shape of lock cylinder for every country-specific requirement and for every door.

**ABUS SECURITY-CENTER GMBH & CO. KG**

**ABUS Security-Center GmbH & Co. KG**  
 ABUS Security-Center is a manufacturer of innovative alarm, video surveillance, and access control systems for the security requirements of businesses and private users. The company's focus is on developing particularly user-friendly products for all-round security, blending mechanical and electronic components. ABUS Security-Center's headquarters and production facilities for access control systems are located in Affing near Augsburg.

**ABUS PFAFFENHAIN GMBH**

# THE PEOPLE WITHOUT WHOM THERE WOULD BE NO ABUS: OUR EMPLOYEES

Innovations are invented by people. Services provided by people. Customers advised and looked after by people. That's why our employees are the foundation and driving force of our success. We are grateful for our great team! We treat each other honestly, openly, and fairly. We want everyone who comes to work at ABUS to become part of the family, feel comfortable with us and stay with us for a long time. To this end, we encourage commitment and personal responsibility at all levels and in all processes. We train our junior staff ourselves and help them develop their careers. Our Sport & Health program keeps our employees fit for the tasks ahead. We are therefore delighted to be working hand in hand to successfully enhance our strong ABUS brand.

**CLAUDIA WITT**  
Foreign language assistant at ABUS KG

"Over the past 30 years, we have grown enormously, but our values have remained the same. You can see that the ABUS family does everything for their employees so that they feel at home here. If you have something on your mind, you'll always find a sympathetic ear here."

**JOHANNES BREMICKER**  
President & CEO ABUS USA

"Once people get to know us and our solutions, they see the quality and the other things that differentiate us from our competitors."

**ANDERS HOLGAARD**  
CEO ABUS-Gruppen Nordic A/S

"I am certain that we'll continue our success story here in Scandinavia thanks to our genuine customer accessibility and market expertise."

**MIGI TO**  
CEO ABUS Hong Kong

"I appreciate the philosophy of ABUS: It is not just about security solutions for consumers, but rather a secure job for every employee."

**DIRK MÜLLER**  
Team Leader ASW Management

"You immediately notice the familiar and warm atmosphere as soon as you come to ABUS. I appreciate the respectful way everyone treats each other. From trainees to management – at ABUS, everyone can rely on each other."

**SOPHIE PONZER, MELANIE LÜLING**  
Industrial management assistants at ABUS KG

"We feel well taken care of at ABUS. Our relationship with colleagues is very friendly. What's more, thanks to our wide range of tasks, we never get bored. One particularly exciting but exhausting aspect of our job is trade fairs – but even then it's always fun."

**AXEL RÖSLER** Sales & Marketing  
Director Mobile Security International

"I'm from a family of cyclists, and ABUS gives me the opportunity to combine my hobby and work. Not only do we feel the family spirit within the company, but also our branch offices and customers worldwide. The fact that we sell what are very honest products makes my life in sales so much easier."

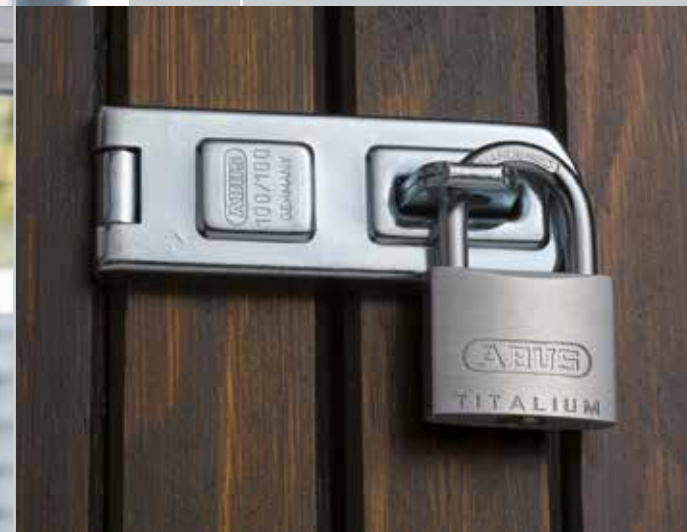

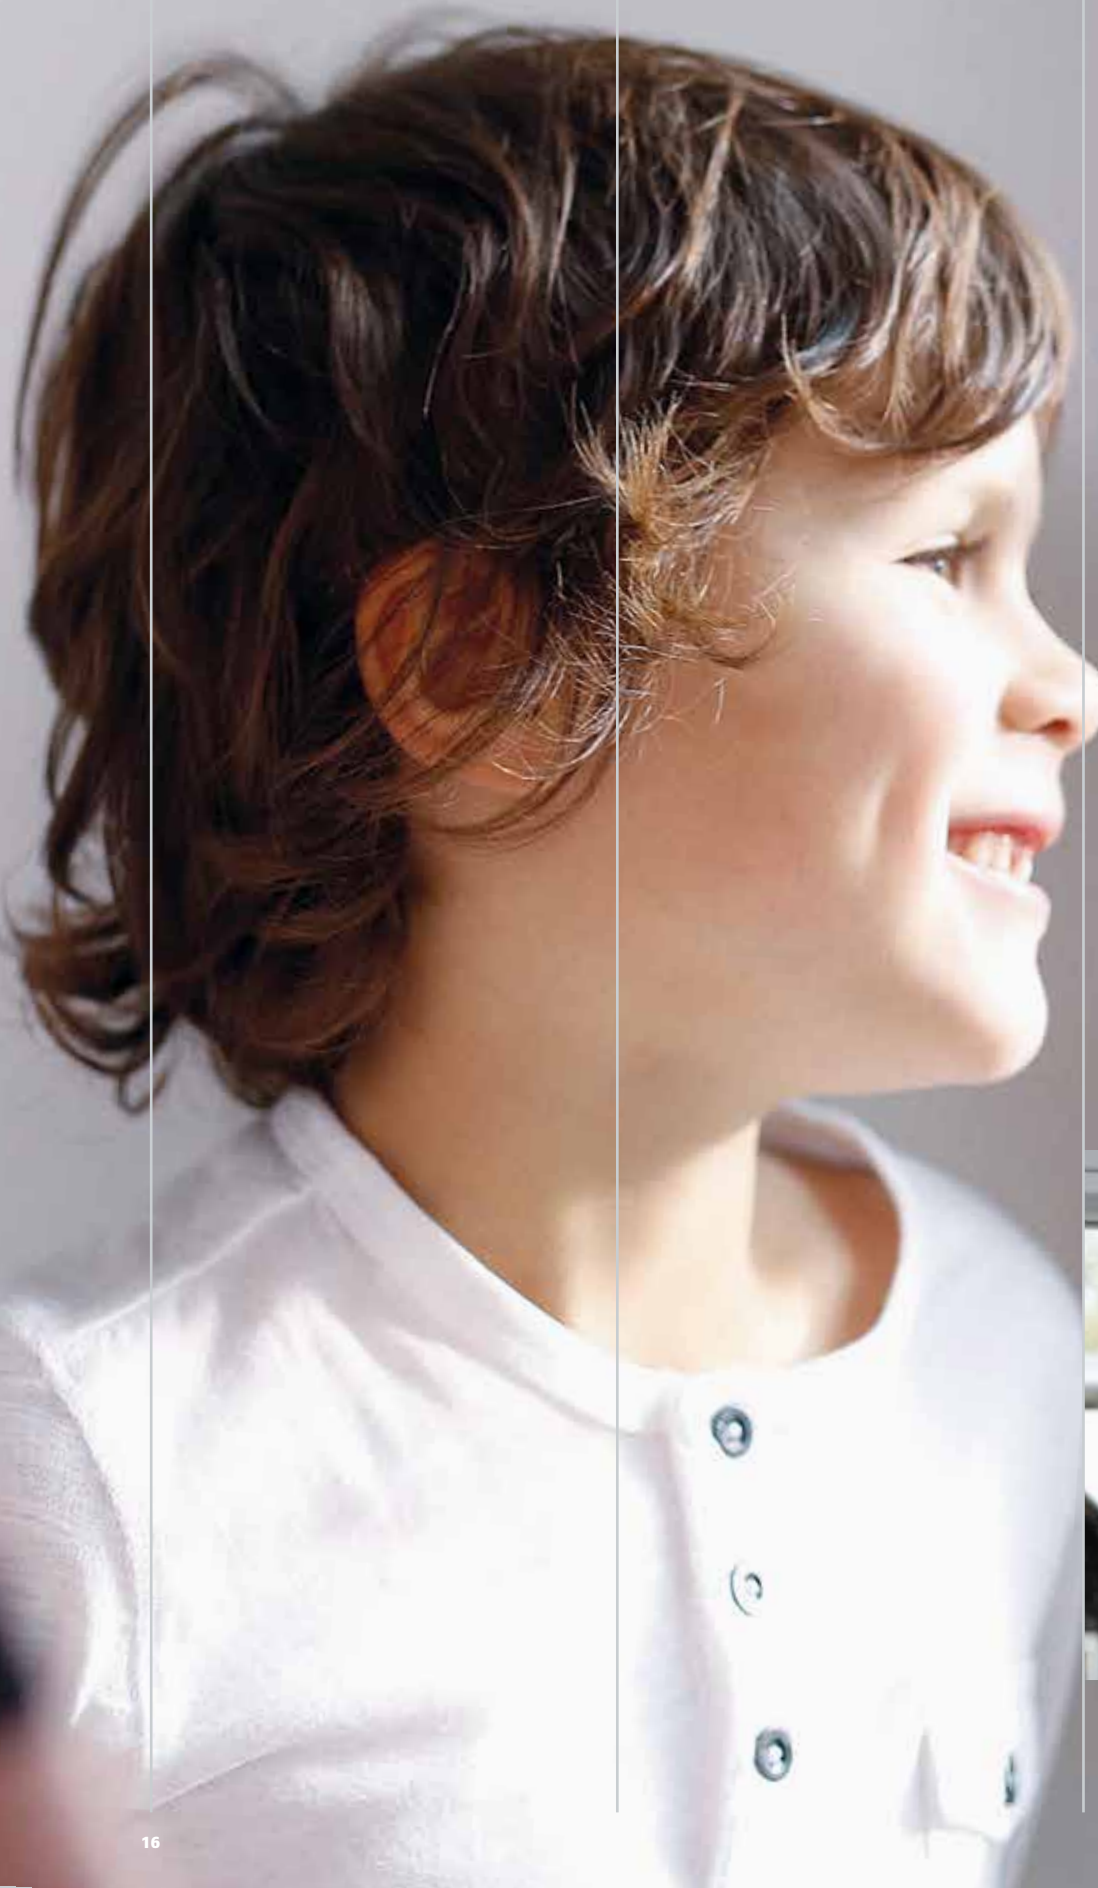

# MULTIFACETED SECURITY FOR THE HOME – PROTECTED BY THE GLOBAL MARKET LEADER

We at ABUS have the solutions to give you the peace of mind you desire, so you don't have to worry about someone breaking into your own four walls while you sleep at night or when you're out during the day – we at ABUS have the solutions to give you the peace of mind you desire! Home Security is the area in which we have been experts since the company was first founded. Time and again, we have developed innovations precisely for this purpose. To guarantee your security from the cellar to the roof.

From door cylinders to additional window locks. The original product on which our success story has been founded, the padlock, is now available in a wide variety of models and materials for every application. From the love padlock for attaching to bridge railings to the lock for your garden shed. Even in application scenarios where locks are exposed to up to ten tons of tensile force, we have the right solution.

#### Without doubt the right partner.

At ABUS you will find the right security solution for the countless requirements of your customers. Our product portfolio includes superstrong GRANIT™ padlocks for the most extreme of demands, the 360° classic Diskus®, brass, and aluminum models as well as special solutions such as the KeyGarage™ key depot. ABUS also impresses with the high service level it provides: This means that locks with the same key can still be reordered many years later. Colorful padlocks with an engraving service and the environment-friendly ECOLUTION™ padlock series add to our diverse range.

# BASIC MECHANICAL PROTECTION AGAINST BURGLARS

The door is pulled to, a window is on tilt: just two of many opportunities for burglars to access a room in a matter of seconds. ABUS has the right answer for every security issue: from additional door locks, strong mortise locks, sturdy door fittings with pulling protection to door cylinders with a security card.

And when fitted with our window locks, grating and roller shutter locks, and door bars, secured windows drive intruders to despair.

#### Security solutions from experts.

Trade partners play an important role in burglary protection. As experts, they help select the right door and window locks to install them on the customer's premises. You can rely on ABUS to provide you with all the mechanical and electronic security solutions you need in your product range: from door bars to electronic lock cylinders. Even from lockable window handles to side hinge units.

**Compulsory or not – smoke alarms save lives.** Fire protection is more than just a simple smoke detector under the ceiling. Our wireless smoke alarms, which are linked to one another without cables, are particularly practical. If one alarm is triggered, all the other wireless alarms within range are also activated. Our trade partners will also tell customers that they should install carbon monoxide detectors just in case their gas heating, stove, or fireplace doesn't work properly. Armed with an ABUS fire extinguishing spray, even inexperienced people can fight an incipient fire quickly and safely.

# ON THE SAFE SIDE THANKS TO RELIABLE PRODUCTS – EVEN WHEN THINGS GET HOT

A fire has broken out in an apartment or house somewhere in Germany right this minute. Another one will in a minute's time. It's something that happens right round the clock. The most dangerous thing about a fire is not the flames, but the smoke. It contains the odorless gases carbon monoxide and carbon dioxide. Anyone who inhales them can fall unconscious within a few minutes and die. Every second counts – and our danger detection and alarm devices help massively and reliably. Smoke alarms belong in every home.

# TIME FOR THE BEAUTIFUL THINGS IN LIFE – BECAUSE SECURITY IS SMART

Imagine a home that understands and knows how to make everyday life more pleasant and secure. Such a “smart home” is a fascinating new world that we can bring about by implementing digital and networking technology. Intuitive and easy to use. Such a house protects, warns, and

thinks for you. At the heart of it are smart security solutions from ABUS. For instance, our wireless alarm system, which can be easily controlled by app from your smartphone or tablet and be upgraded to include video surveillance and access control systems.

The “smart home” is all about improving the quality of life and living, using energy efficiently and, thanks to ABUS, security too. With its Smart Security World, ABUS offers an easy “way in” to a modern home, with reliable all-round security, combined with attractive, high-convenience application scenarios all around the house.

“Smart” doesn’t refer just to the product itself and its control via tablet or smartphone – its actual installation is also super simple. And best of all: You only need one app to control it!

# INNOVATORS AND TREND-SETTERS – BECAUSE YOUR CUSTOMERS LOVE THEIR BIKES

More and more people, especially in big cities, are buying cheap, used bicycles because good-quality bikes often change hands without permission. Or they are worried about locking up their high-end bike outside somewhere at night. We at ABUS have something to counter both of these trends: our robust bicycle locks and intelligent security solutions. We see ourselves as advocates of cyclists – and we're also passionate about being on two wheels. And we've got nothing against e-bikes either. If you love your bike, we're on your side. With locks for every need and every type of bike.

## Alarmingly secure!

With the BORDO™ Alarm 6000A, ABUS presents the world's first alarmed folding lock. In addition to the tried and trusted, highly secure mechanical features boasted by all of the folding locks in the ABUS BORDO™ range, sensitive 3D motion sensors are used that trigger a 100 dB acoustic alarm when an attack is attempted, deterring thieves. The innovative, smart 770 SmartX™ U-lock from ABUS, which can be operated solely by means of a smartphone, heralds the dawning of digitalization in ABUS's mobile security range.

## Full range with key service.

ABUS covers the full range of mobile security with its high-quality U-locks, chain locks, folding locks, armored cable locks, coil cable locks, cable locks, and component locks – the right bike lock for every need. From the simple coil cable lock for children's bikes to the ultra-secure U-lock with patented, hardened square-parabolic shackle. Another great strength of ours: our service! Take our YourPlus™ system, for example, which we offer exclusively for our Plus lock cylinders. This system lets you use different locks with just one key. Any number of keys can be ordered post purchase and it's even possible to have locks made for an existing key.

# BE SAFE ON THE ROAD – BE SMART, BE STREET-SMART

Wearing a bicycle helmet greatly reduces the risk of head injuries in the event of an accident. Anyone who wants to be a role model for others, be smart about getting through traffic and look smart all at the same time should wear one – when racing, mountain biking, touring, shopping, or on the way to work or university.

#### For small, large and smart heads.

Helmets that carry the ABUS brand name feature high-quality materials and clever and attractive designs. From helmets for babies and children, through urban helmets for shopping or commuting to the office, to high-end sports helmets for the Giro d'Italia or the Tour de France: ABUS offers innovative bicycle helmets with good ventilation, great comfort, and individual adjustment to fit your head. In addition, an integrated rear light provides additional safety on many children's and city helmets.

# FEEL FREEDOM, EXPERIENCE SECURITY – EVERYWHERE

Every year hundreds of thousands of motorbikes, scooters, mopeds, and light motorcycles all around the world disappear. In many cases, they are simply carried away, placed in the back of a van and later sold in neighboring countries. Electronic immobilizers and alarm systems offer good protection against theft, but only in combination with strong locks from ABUS are motorcycles protected effectively.

For bikers, being on the road is a unique feeling of freedom. We want this feeling to remain a pleasure for as long as possible!

## Loud, bright, or extra-strong – special locks for special motorbikes.

Whether you have a 125, scooter, chopper, quad, or sports bike, ABUS offers a huge range of ingenious mechanical and mechatronic security solutions. For example, the space-saving brake disc lock with 100 dB alarm function and 3D vibration sensor. Or a classic, solid U-lock, a lock-chain combination, a cable lock from the Steel-0-Flex series, and special security devices for helmets and accessories.

The GRANIT™ Detecto SmartX 8078 brake disc lock already reveals what the future of motorcycle security looks like. Protection, location, and alarm function – everything can be controlled via a smartphone!

# WHETHER ON LAND OR AT SEA – SOLUTIONS FOR EXTREME CONDITIONS

## Perfect protection under the most adverse conditions.

Our special locks secure items of value, especially under extreme conditions. The best example of such applications is the snowmobile security device: It defies cold, wind and moisture and offers functional security.

Marinas and the winter storage sheds of outboard engines are often open invitations to gangs of thieves. They often have it far too easy. Sometimes they even steal entire trailers with the boats on them. But above all, they target vulnerable equipment. One of their favorite targets: outboard engines. We have security devices in our portfolio that have been specially developed for use with trailers, boats, and in inshore waters. Use one or more of these and you can leave your boat at its berth without any worries.

## Resistant to salt water, sea air, and thieves.

We have created a world of maritime security equipment specifically for boat owners. From a highly secure, corrosion-resistant lock for outboard engines to compact, extra-tough padlocks made of hardened special steel, with sophisticated locking mechanisms and designed specifically for keeping trailers and cabin doors secure.

# FOR YOUR CUSTOMERS' COMMERCIAL PROPERTIES: FULL CONTROL OVER DOORS AND GATES

For anyone who is responsible for ensuring that valuable inventory remains on company premises and doesn't disappear overnight, ABUS has the goods to let you sleep tight: state-of-the-art access control solutions. Specifically with commercial properties in mind, we offer a browser-based system with flexible control via your intranet or the internet. Creating and adapting locking plans, responding within a matter of seconds, opening doors at the push of a button, and activating the alarm system – with ABUS, all this can be done on site or when on the road via an app. It enables you to keep every property effectively and conveniently under surveillance.

#### Do you know wAppLoxx?

Our system not only enhances your protection against burglaries, it can also be used to manage authorizations and schedules – simply on the web or with the aid of the app thanks to the browser based software. What's more, the system can be used to activate an alarm system or integrate ABUS IP cameras for video surveillance. It is very important for businesses to be able to manage the access authorizations of their employees. With this solution from ABUS, changes can be responded to at any time. Locking plans can be drawn up and adapted with just a few clicks.

# PRECISION ACCORDING TO PLAN – MECHANICAL, ELECTRONIC, MECHATRONIC

From a detached house to a complex of buildings: We realize single-key locking systems as well as small to very large locking systems and offer you the optimum solution for every security requirement. Thanks to our multifaceted product portfolio, we secure buildings by implementing a well thought-out, seamless concept. We offer you the right cylinder for every door and enable you to open all the doors of your property with just a single key. You can flexibly combine mechanical and electronic locking cylinders within a locking system and likewise open them with just a single key. You can also control alarm systems and third-party systems thanks to the transponder built into the key cap. ABUS locking systems can be extended at any time so that you can respond flexibly to changes in the structure of the building.

**Innovative technologies for optimum protection.**

The locking cylinder is the heart of every door and the matching key usually stays on the user almost 24 hours a day. Our innovative technologies provide reliable protection against mechanical attacks on the locking cylinder and manipulation of the key so that users are optimally protected.

# CORPORATE VALUES AT A GLANCE – LOCAL AND INTERNATIONAL

## Various technologies for variable video surveillance solutions.

Our range includes surveillance cameras and recording devices for almost every application. When it comes to analog video technology with HD quality and IP-based video surveillance, we offer a portfolio that is unique with respect to its depth and breadth. Continuous development, first-class workmanship and, last but not least, the coordinated interaction of the components ensure that our video surveillance systems provide unrestricted security.

Everyone quickly learns to appreciate the preventive deterrent effect of ABUS video surveillance. If the cameras detect unauthorized movements in some corner of the company's premises, the perpetrators can be convicted by image evidence. We support you with our wide range of cameras, components, and accessories. From a local solution to networking several locations. Individual industry solutions for every requirement.

# EVERYTHING UNDER CONTROL – SECURITY 24 HOURS A DAY

An acute risk of being burgled when absent? Not if our “security manager” is keeping watch! This is what we call our alarm systems that are much more than just devices with a howling siren. Our wired, wireless, and hybrid alarm systems comprise state-of-the-art software and hardware. Highly effective in the event of a robbery, the theft of goods,

computers, and data, damage to property, fire, smoke, and water damage. ABUS alarm systems are the right solution for commercial buildings or offices. Individually scalable, reliable, and expandable. And always technically up to date.

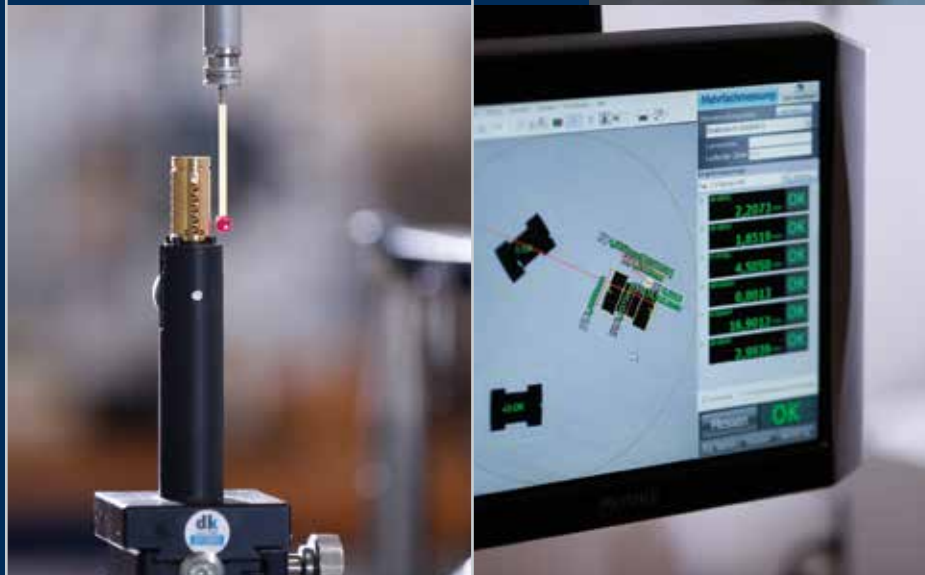

**The “security managers” for your company.** Compatibility and flexibility – two of the outstanding features of our wired and hybrid alarm systems. Whether for office buildings or larger complexes – enhanced by video surveillance and access control – we have a suitable security solution for every commercial requirement and for every property.

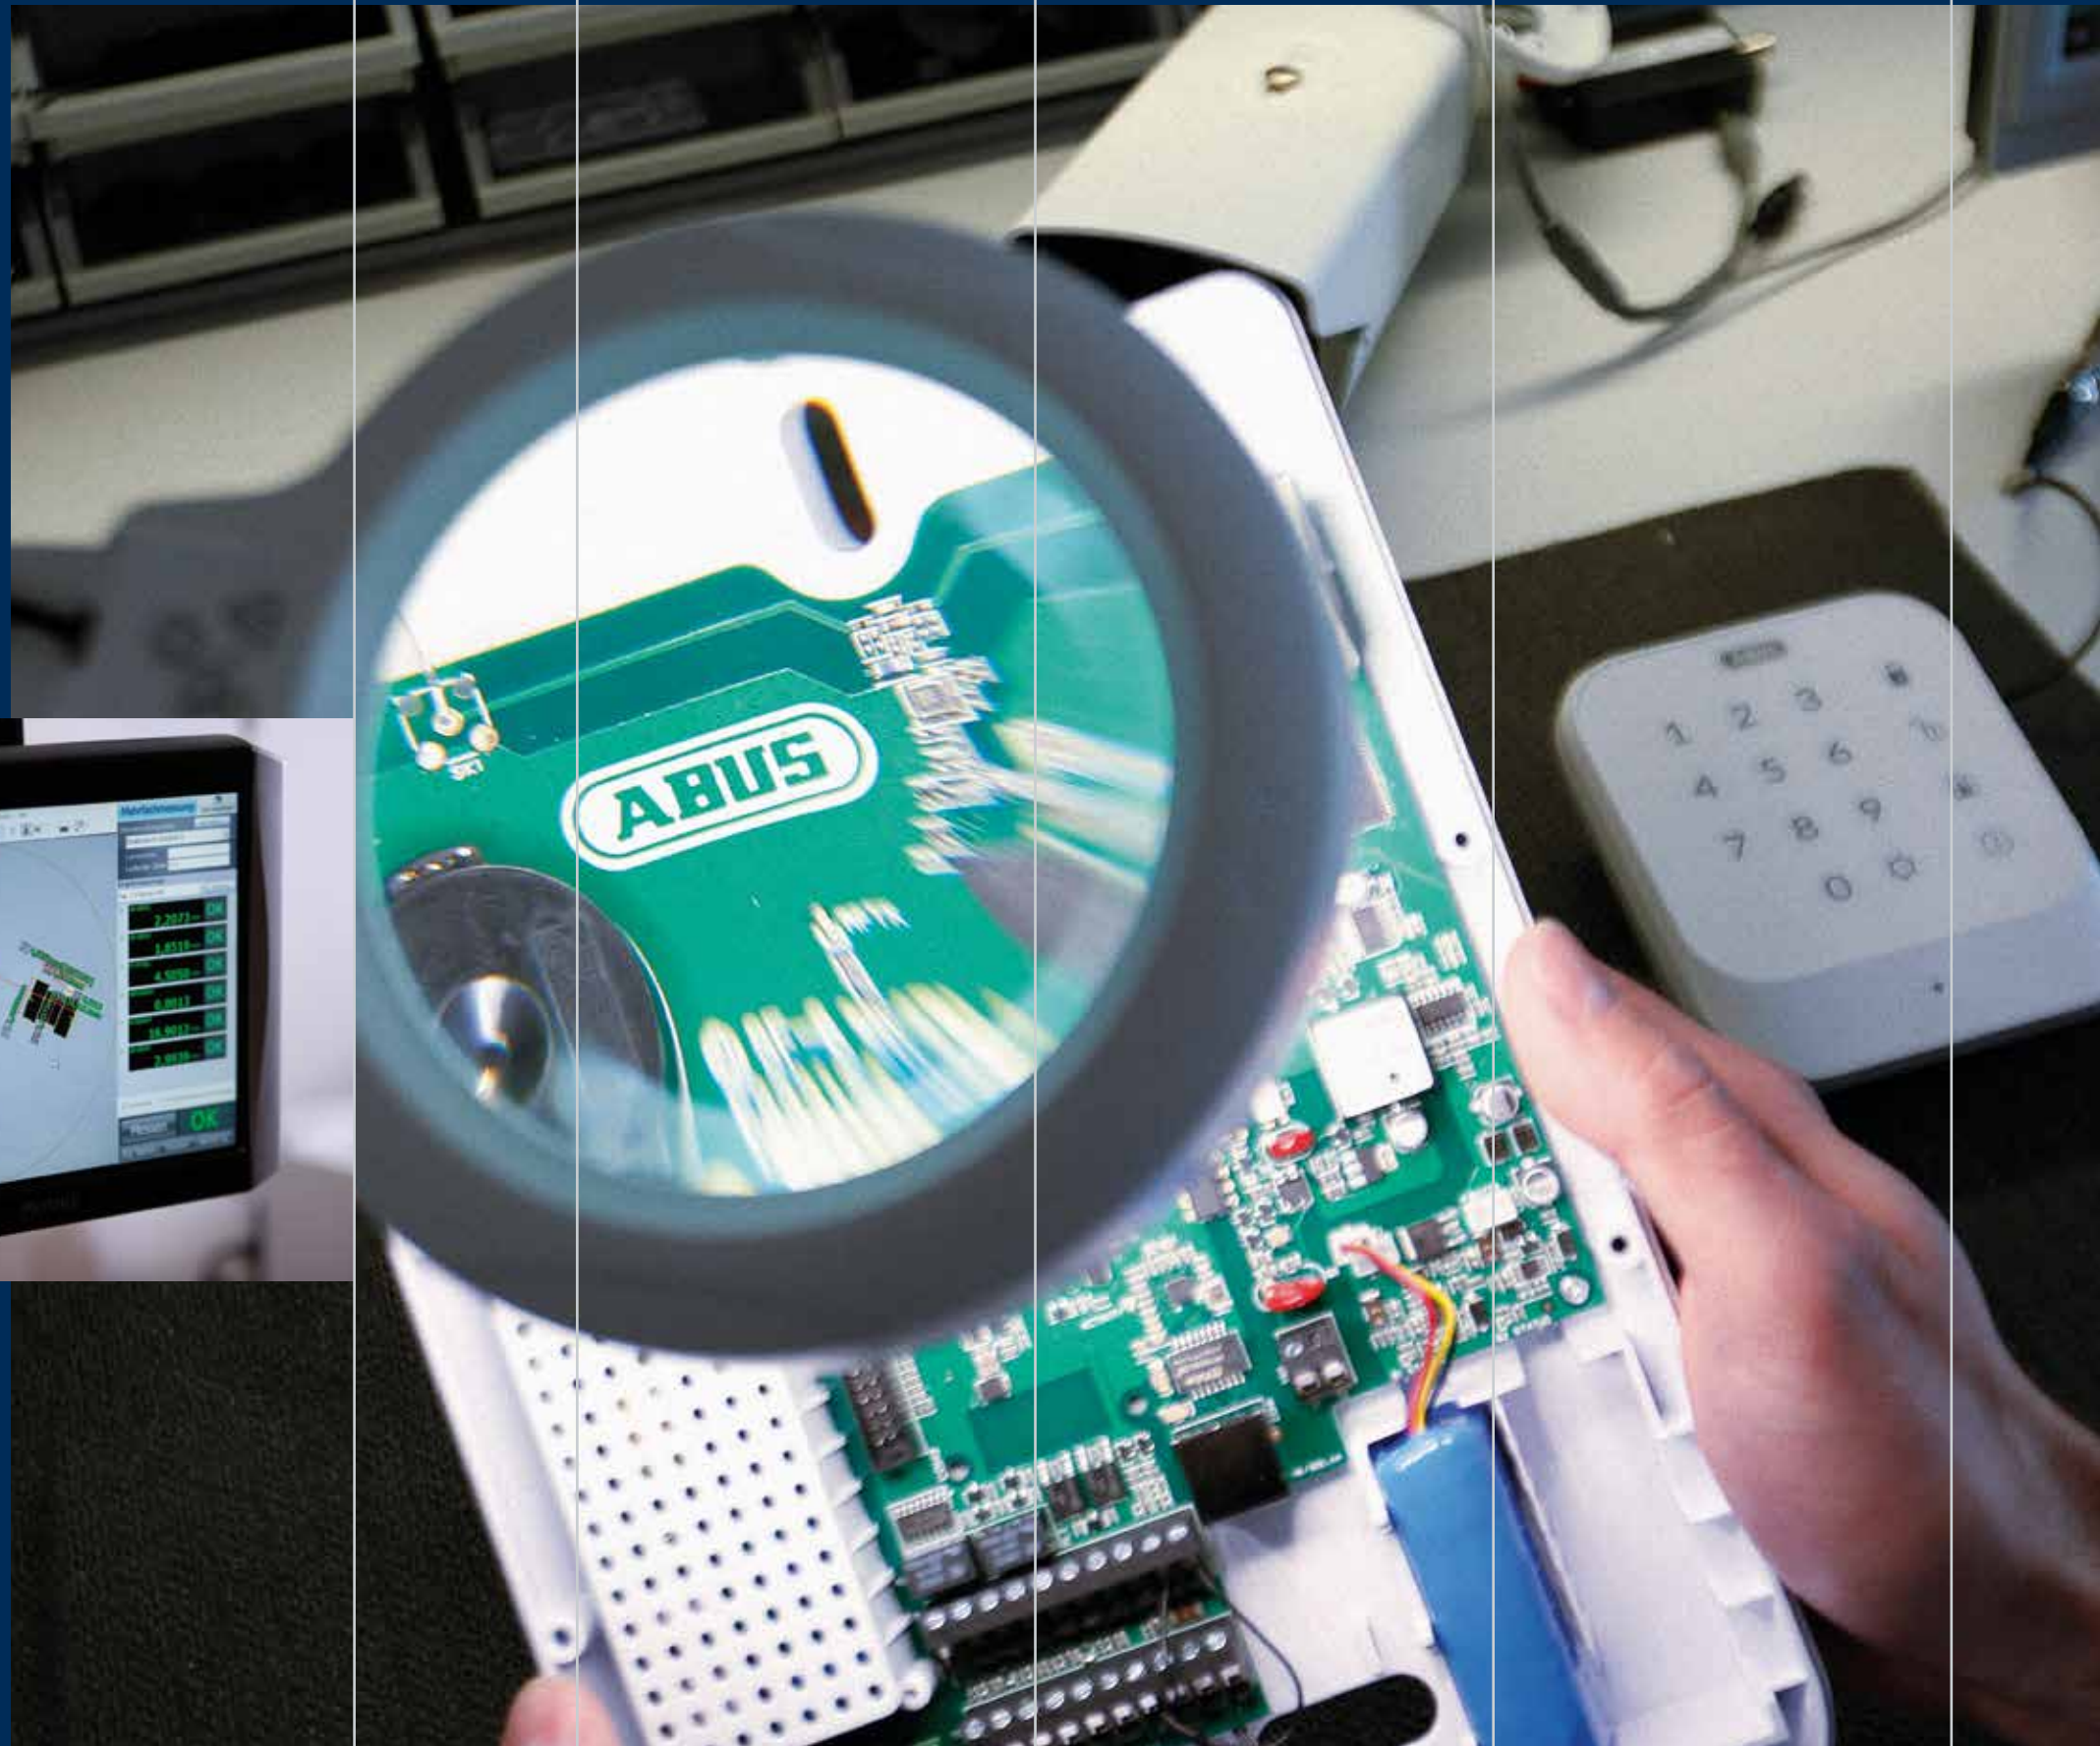

# FRESH IDEAS THAT ARE TURNED INTO INNOVATIONS

With true commitment and purposeful creativity, we want to meet tomorrow's security requirements. Our international research and development departments turn new ideas into successful innovations. Creative specialists work here with the latest software and high-tech equipment to develop new security systems that are ready to face up to all challenges. The list of innovations by ABUS is long. And the ingenuity of our employees will ensure that this list will get longer and longer.

**Measuring. Investigating. Testing.**

Innovative products are only ready for the market once they have proven their quality. To achieve this, they have to withstand some extreme material tests and simulations in our state-of-the-art testing laboratories. We regularly take products from the ongoing production process and subject them to the heaviest of loads. In addition to classic material tests, these include impact tests, mechanical material tests, manual burglary simulations, and cold tests.

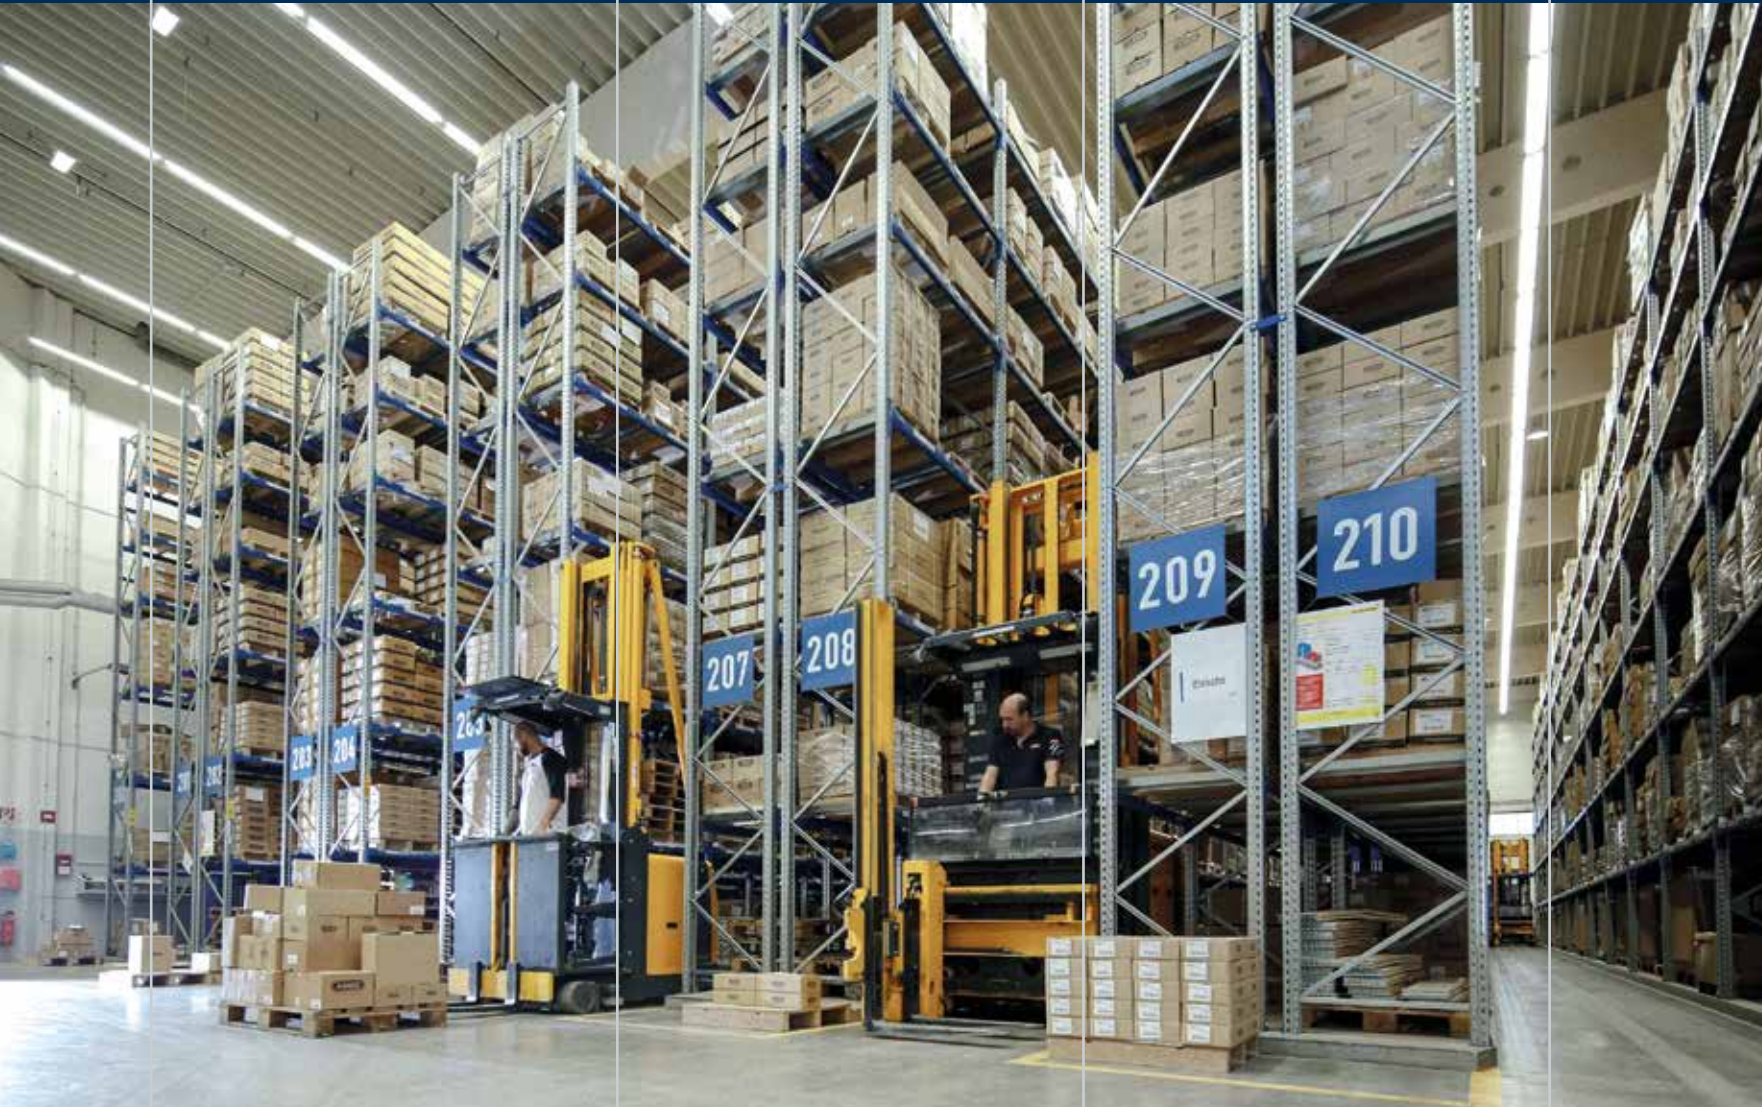

**Outstanding brand quality.**  
 ABUS quality and design both set benchmarks wherever providing optimum security and the protection of people and property are the focus. Our brand quality is repeatedly verified in neutral product tests and by objective testing institutions. For instance, ABUS regularly takes prizes in the Red Dot Awards or the Plus X Award. Awards which are not given to us simply as a matter of course, but which are the result of our constant and impassioned work.

# QUALITY AND RELIABILITY – ABUS SECURITY TECH GERMANY

Back in the 19th century, the phrase “Made in Germany” was used in the United Kingdom to warn people against cheap German imports. The result was the opposite: It became synonymous with outstanding German engineering skills and top quality. We are committed to Germany as a location for industry and business. And to maintaining the very best product quality – Made in Germany. Developed by highly trained specialists, produced using top-class raw materials and semifinished goods. All ABUS security products impress with their quality and reliability. Confirmed with its own internationally recognized seal of quality: ABUS Security Tech Germany – at home in production and sales, all round the globe.

# PROXIMITY TO THE TRADE, PROXIMITY TO THE CONSUMER

To ensure that our products and solutions find their way to their users, we have always shown trust in our trading partners. We enjoy close relationships with our partners from which our customers benefit. They receive excellent advice and the ABUS products they need. Our partners are supplied from our ultramodern logistics center. It's packed with ideas for facilitating rapid deliveries. The inventory, depth of the product mix and delivery capability are optimally aligned with the requirements of the markets. After all, no customer anywhere in the world should have to wait even one day for their own good piece of security.

### Smooth distribution and logistics.

We clear the way for fast order picking – freehand, paperless, and, as a result, extremely customer oriented. To make this possible, ABUS's logistics center is kitted out with the latest technology. One good example of this: pick-by-light. With this method, the system indicates by means of light signals which products must be added to the order and in what quantities. A system with short distances. The cardboard shipping boxes, which carry barcodes, then pass through assigned stations and are filled with parts without any errors made.

# ABUS SECURITY WORLD – THE SECURITY EXPERIENCE

ABUS is a dynamic brand. At home all over the world, domiciled at our headquarters in Wetter on Germany's Ruhr river. This is where our brand presents itself in its full diversity: in the ABUS Security World. A fascinating experience for customers, partners, guests, and employees alike. They all begin by walking past the ABUS logo, which comprises thousands of padlocks – a reminder of the company's very first product. On two floors, our visitors experience the issue of security in a large number of fascinating exhibition worlds. From a journey through time in our brand museum to presentations of the latest product developments in the showrooms.

**More than just a brand experience.**

The ABUS Security World is more than just a brand experience: It is also an information center and academy for training our commercial partners. Novel presentations, for use both at large-scale retailers and specialist stores, put the spotlight on ABUS products. In the Display World, we present our ideas for targeted marketing at the point of sale – for today and tomorrow. The spacious conference and training center of the ABUS Academy is where we impart our know-how. Our bistro serves as a popular meeting place for open and uncomplicated communication.

# FROM PROS FOR PROS – CHAMPIONS RELY ON ABUS

We are happy to share our know-how and support sports teams and companies as a sponsor. We are particularly committed to promoting world-class cycling: since 2016, for example, through our partnership with the Movistar Team, one of the top teams on the UCI World Tour. As its official security and helmet partner, we equip the team with high-end racing helmets and dependable security equipment. In addition, we support paratriathletes, paracyclists, basketball players, a mountain bike team, and a water polo team nonmaterially, financially, and with professional equipment.

**From pros for pros.**

Not only the athletes benefit from our commitment, but also our own product development. The professionals give us valuable feedback on their daily experiences in elite sport, which flows directly into continuing development of our products. For example, new high-end helmets are created for the cycling team we sponsor, and these can also be purchased by our private customers in specialist stores.

# A SOCIETY IN WHICH WE TAKE ON RESPONSIBILITY

The ABUS Group lives up to the values anchored in the Christian faith. Among other things, this can be seen in our social commitment as expressed by our support for various organizations in Germany and abroad. For example, we make donations to the "Evangelische Stiftung Wetter", the local volunteer fire brigade and to residential facilities for the disabled and those in need of care. In addition, we finance language lessons for children with a migrant background. Purchasing products from workshops for the blind, donating money and items to kindergartens, and sponsoring local sports and town festivals are further symbols of our commitment to live responsibly.

One major example of a national project to which we have pledged financial support is the charity entitled "help the poor and the needy e.V.". On top of this, ABUS continues to support Christian missionary work and schools both in Germany and abroad.

Sustainability for the preservation of nature – high environmental standards apply at all of our sites around the world. These include the sorting and avoidance of waste, the use of efficient technical equipment, and the reprocessing and recycling of materials and resources. All documented by numerous certificates and awards presented to us all round the world!

## "Stadthelm" project.

The German Pediatric Neurology Society (Bundesverband Kinderneurologie-Hilfe e.V.) and ABUS have joined forces to initiate the "Stadthelm" (City Helmet) project, an extremely successful nationwide prevention and charity project to promote the voluntary wearing of a helmet. For every city helmet sold, we donate 5 euros to help support the work of the society. The Stadthelm project is represented in more than 150 participating German cities and regions – and is now going on a tour of Europe. In the meantime, the helmet is now available in Austria, France, Denmark, and Switzerland.

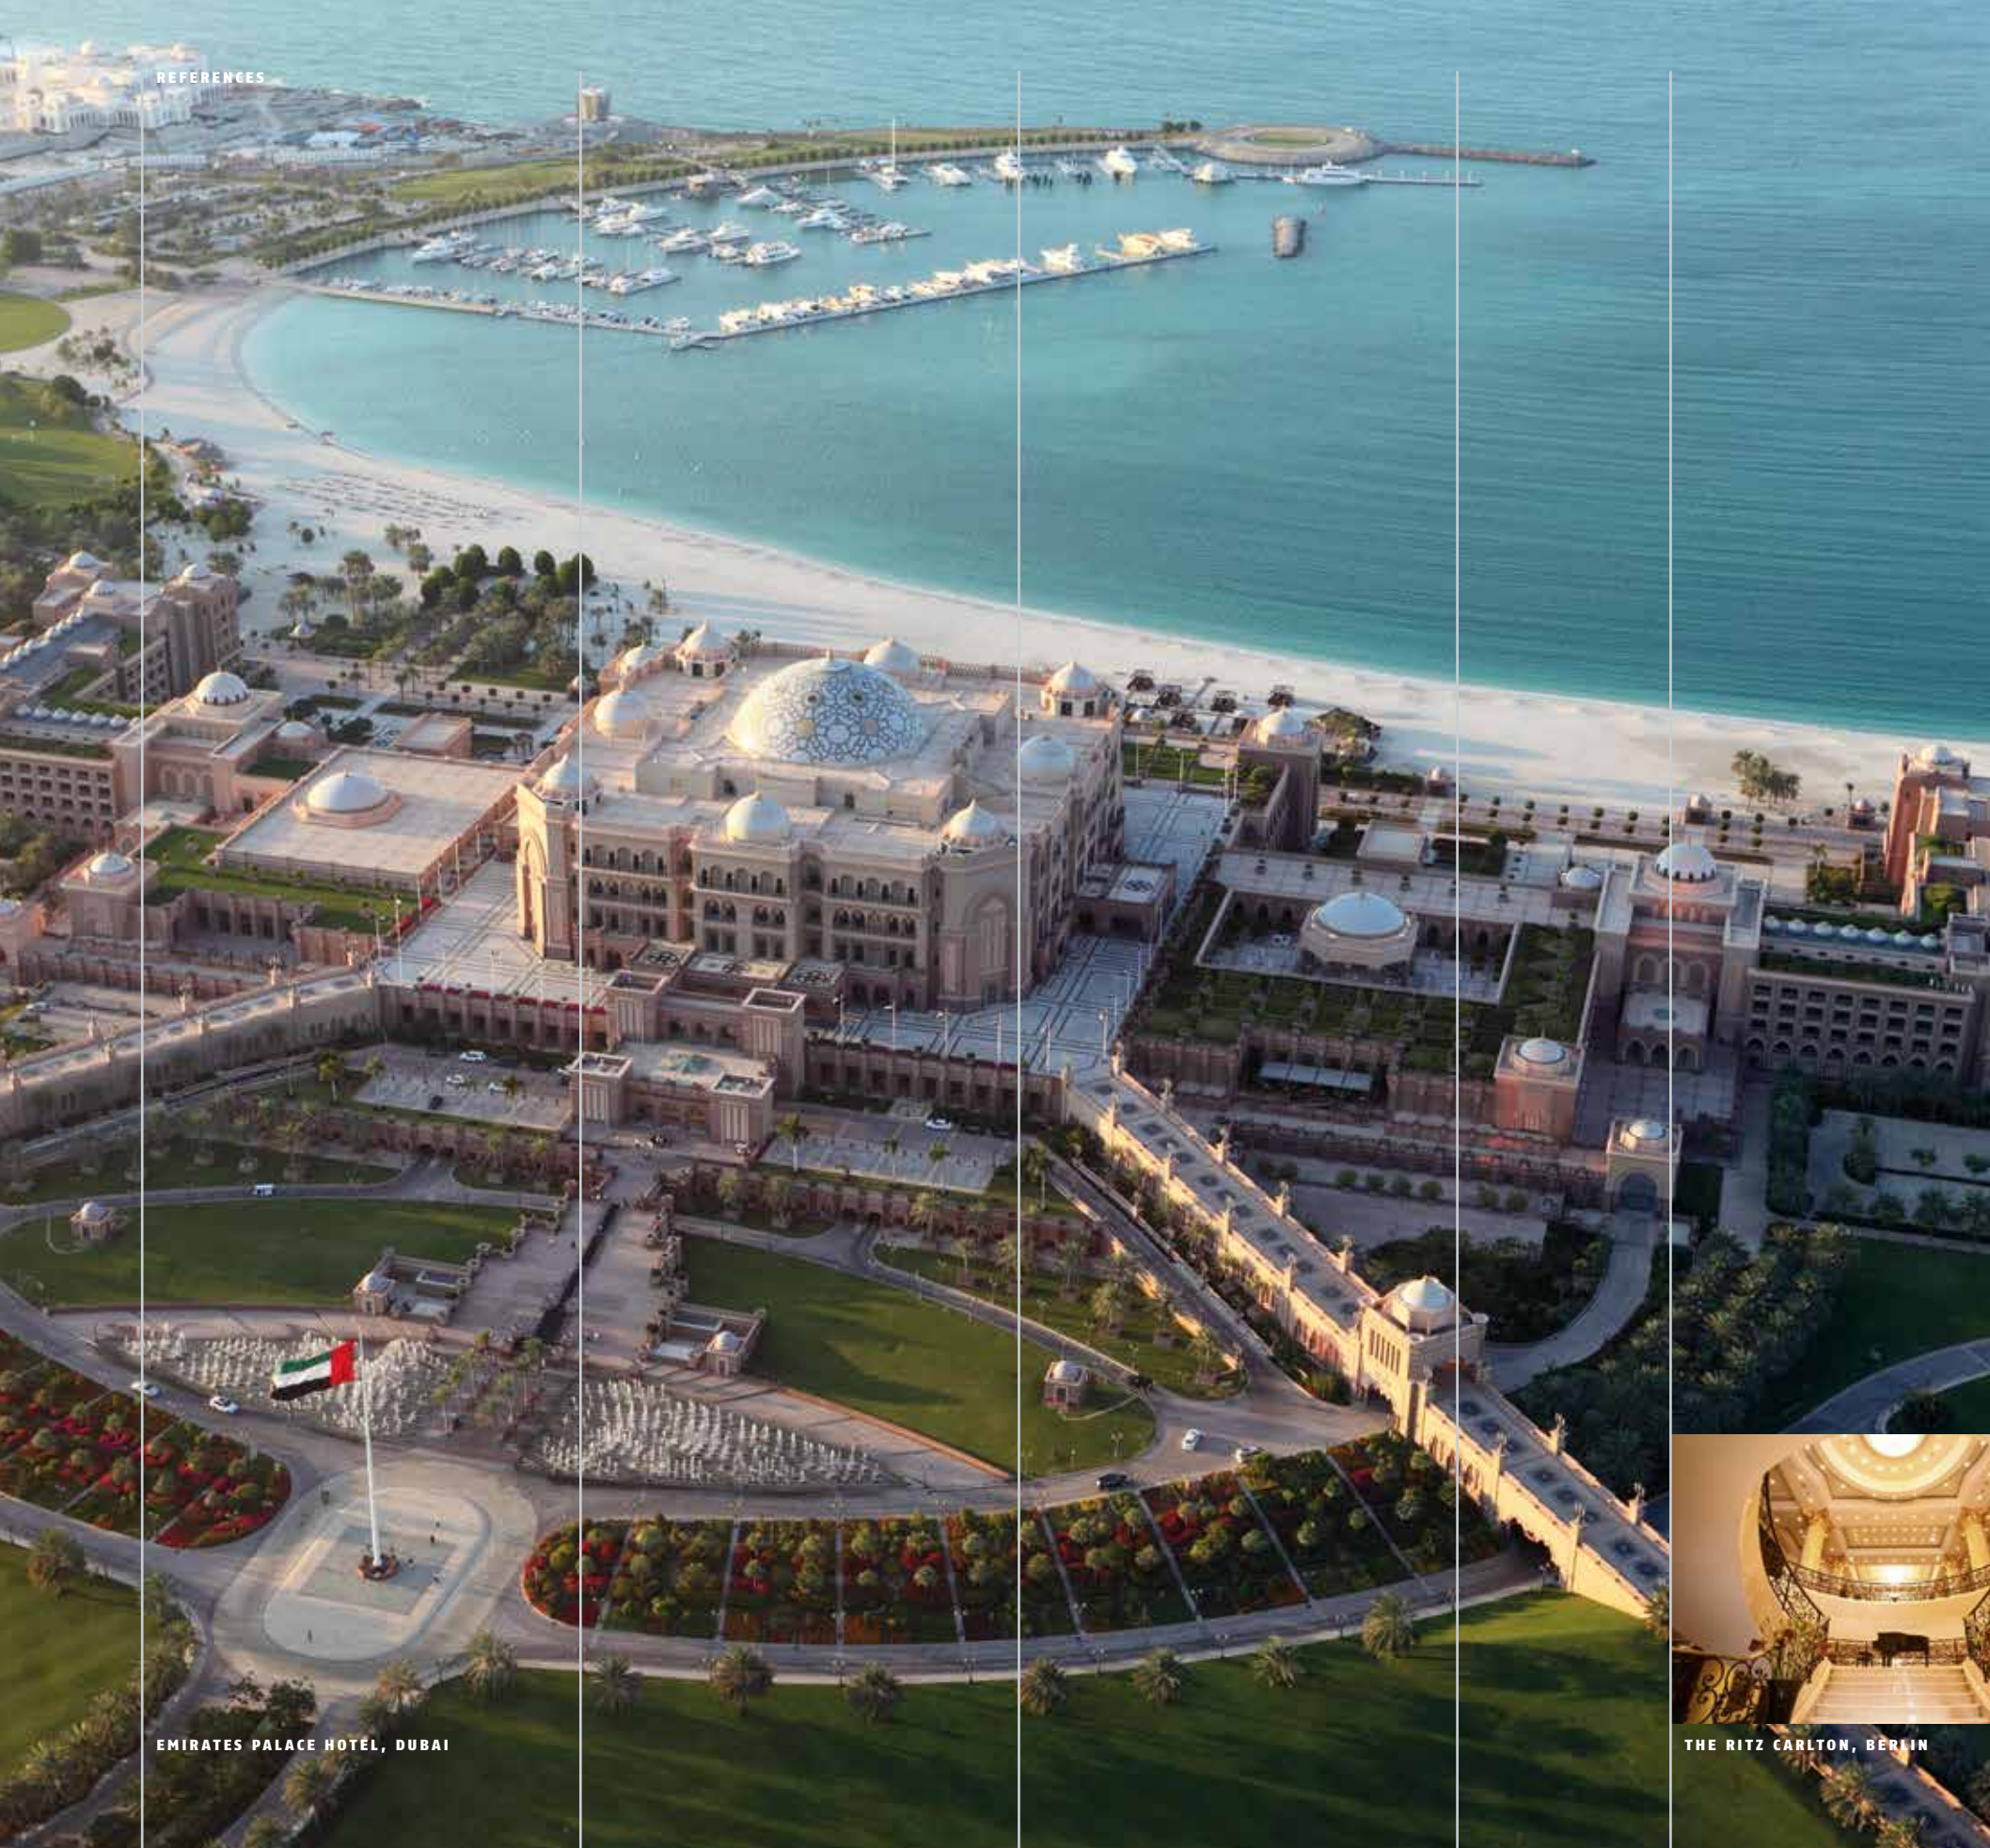

### ABUS's commitment in South Africa!

The 11 to 17-year-olds in and around Stellenbosch love bicycles. They are learning to cycle and expand their living environment at the same time. Since they maintain and service the bikes themselves, they are also learning to assume responsibility. And only those who attend school are allowed to use the bikes.

By sponsoring this project, ABUS is indirectly contributing to these children's education and giving them the prospect of a better future.

EMIRATES PALACE HOTEL, DUBAI

# OUR REFERENCES: FROM LUXURY HOTELS TO UNIVERSITIES

The 1st German Police Oldtimer (classic car) Museum in the city of Marburg protects its priceless treasures with one of our wireless alarm systems. The subsidiary of an insurance group does so, too. As do the branch offices of a mobile phone provider. Our locking systems are being used to secure some famous museums, power plants, universities, schools and boarding schools, luxury hotels, shopping malls, and freight handling centers. These are just a few of our countless references within Germany and abroad. What all of them have in common: satisfied customers!

**Whenever you need security – go to ABUS.**

To prevent theft, burglary, and vandalism in the commercial sector, we offer flexible and high-quality locking, alarm, and video surveillance systems. Tailored to individual customer requirements. Property owners all around the globe are impressed by our solutions.

CHU ESTAING HOSPITAL, FRANKREICH

UNIVERSIDAD LABORAL DE GIJÓN, SPANIEN

# DIGITALIZATION FOR A SECURE FUTURE

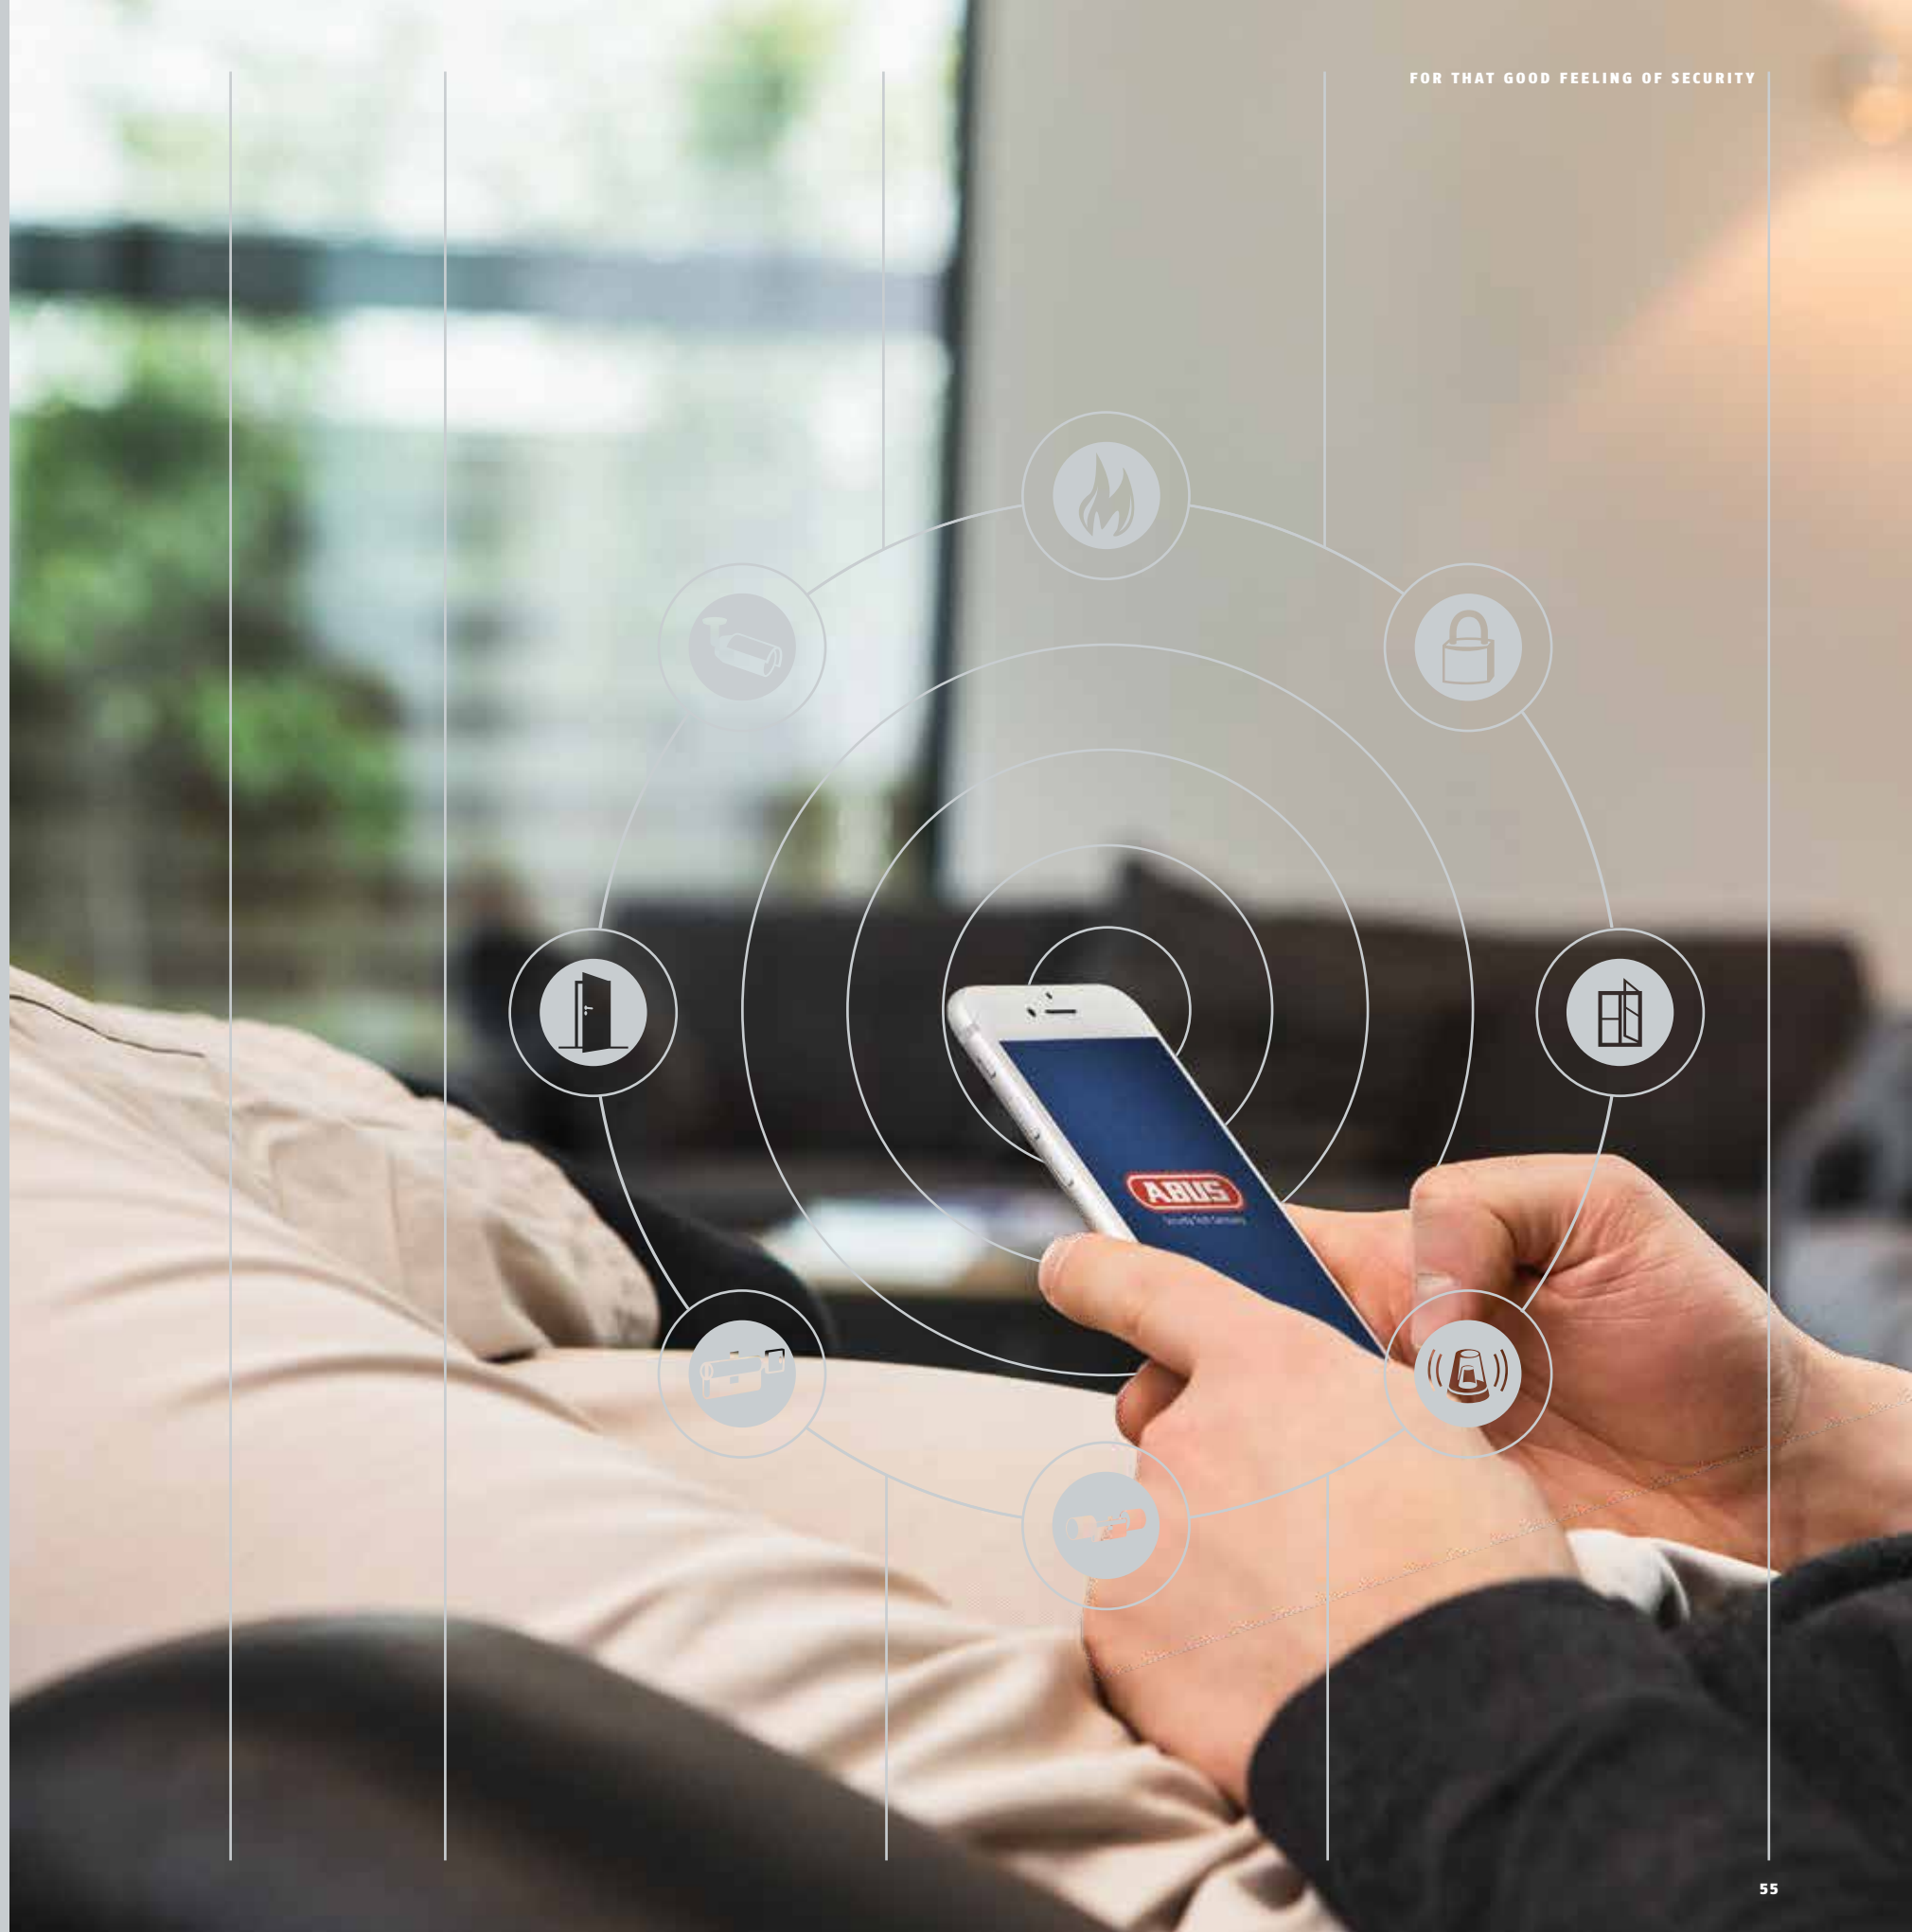

Let's take a look at a future that still seems like a distant vision and yet is already tangible. This vision of a future characterized by highly effective security is emerging with the megatrend of digitalization. It will permeate all areas of life in the future.

Security systems will also become smart, adapt to the individual security needs of their users, and independently respond to certain hazardous situations.

Will the good old house key still exist in this world of tomorrow? Definitely. But digital access controls will increasingly take its place. In large corporate buildings as well as in private households.

The digitalization and networking of all kinds of technical system and articles has long been a feature of ABUS' research and development work. With the aid of different security technologies, end-to-end solutions are being created.

No matter what the future holds, we will play a decisive role in shaping it. That's something you can be totally sure of.
