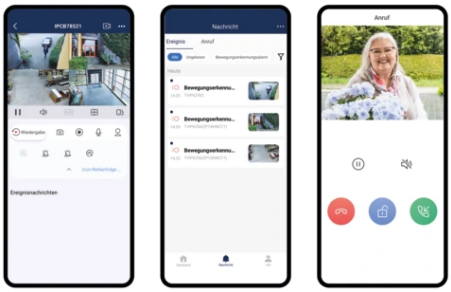
# ABUS Link Station Pro (iOS)

Art.-Nr. APP12850



FROM A DISTANCE - AND SECURITY ALWAYS WITH YOU
With the ABUS Link Station Lite app, you are always close to your ABUS devices, even from a distance.
The app offers remote access to selected ABUS products via Wi-Fi and mobile internet. For example, you can set up a security camera directly on your smartphone or tablet using a QR code - without tedious configuration on your own router.

With the pinch-to-zoom function, you can zoom continuously into the live image and camera playback. It is also easy to pan and tilt the camera using the touchscreen of your mobile phone or tablet.

You can also switch on lights or open the door for the parcel courier while on the move - all in this app.

Push notifications and email transmission
ABUS Link Station Lite notifies you via push notification when an event occurs: for example, when someone rings the doorbell or a motion alarm has been triggered. You can create instant images or video clips directly from the live view or playback. This data is accessed via the local device memory. From there, it is possible to send the files by email or upload the clips and images.

Access to the live view and playback with ABUS Link Station Lite is limited to 60 minutes/month. Unlimited access is provided by the ABUS Link Station Pro app, which is subject to a charge.

Please ensure that the latest firmware is installed on all devices.

ABUS Link Station Lite is available for Android in the Google Play Store and iOS in the App Store.

## Technologies

- Intuitive user and operator interfaces, e.g. camera arrangement via drag & drop
- Remote access to live images and recordings via mobile end devices
- Live image display from up to 16 cameras in landscape mode
- Push notification when someone calls

Subject to technical modifications. We assume no liability for mistakes and printing errors. © ABUS 11/2026

# ABUS Link Station Pro (iOS)

- Direct saving of snapshots/video clips from the live view
- Pinch-to-zoom function: stepless digital zooming in the camera's live image and playback modes
- Control and configure a zoom camera (PTZ) using the touch screen
- Control switches or relays, e.g. to open a door or operate a light switch
- Secure connection via encrypted data transfer
