

VISUAL HIGHLIGHT ON THE CEILING

At 2.3 centimetres high, our RWM160 smoke alarm is an ultra-flat design highlight and provides fire safety within a radius of about 40 square meters.

Protect yourself, your family, the family guinea pig, dog and anything else that may belong and install smoke alarms! For example, our optical smoke detector RWM160. Optical because as soon as fire smoke particles enter its sensor chamber, it triggers an 85 decibel loud alarm. The permanently installed lithium battery lasts for about ten years. Should the lithium battery run low, a warning signal will sound. All you need to do is check the functionality of the device once a month. Thanks to the user-friendly large test button on the smoke detector, this can be carried out easily even in high rooms, for example with a broomstick.

Technologies

- Quality tested according to Q (vfdb 14/01) and DIN EN 14604
- 10-year battery life – integrated low battery warning
- Ambient light detection, reduction of flashing at night
- Automatic self test
- Large test button for manual self-testing and test alarms
