

FIRMLY ANCHORED

Our KeyGarages 728 and 729 ensure that fire brigades, security services and the like have access to keys to the building in an emergency.

For large rental properties, companies or other real estate, it is usually necessary to ensure that fire brigades, surveillance companies and other security companies have access to keys so that they can get into the building. The two KeyGarages 728 and 729 offer a good solution for making keys accessible for such cases. They are firmly concreted into the wall near front doors and offer reliable protection against break-ins due to their compact, tubular dimensions. The KeyGarages™ 728 and 729 are made of high-quality stainless steel. A small ring at the rear of the cylinder insert serves to securely fix the deposited keys. The two KeyGarages can be used indoors and outdoors.

Technologies

- Stainless steel tube
- Removable cylinder housing made from chrome-plated brass with additional drill protection
- Key ring at the back of cylinder housing for key fixing
- Stainless steel cover for cylinder protection
- Hole diameter: 43,5 mm
