

Long Range Lens

Art.-Nr. BW8050

Seite 1 von 1

The VdS long-range lens is an accessory for motion detectors. It increases their detection range. Installed at a height of 2.5 m, the motion detectors cover an area of up to 15 m x 15 m. With the VdS long-range lens, the detection range can be extended to 20 meters (at 3 meters wide). It is ideal for monitoring long passageways. The VdS long-range lens is suitable for the following detectors: motion detector ECO, motion detector PROFI VdS, and motion detector DUPLEX VdS. In combination with a VdS detector, the exchange lens is also VdS certified.

Technologies

- Increases detection range
- For ABUS motion detectors BW8000, BW8010, BW8020
- Monitoring area: 20 m at 3 m width

Technical data - Long Range Lens

Detector coverage area (m)	20x3 m
Height	10 mm
Installation location	Wall
Length	230 mm
Width	120 mm
