

ADAPTOR CHAIN Superior 7KS/100 black

FASHIONABLE SECURITY UPGRADE

Style meets safety: the ADAPTOR CHAIN Superior is the stylish successor to the ACH IVY and features a newly designed, oval metal loop ring that provides 360° flexibility when connecting.

Thanks to its narrow shape, the ring is particularly easy to guide through spokes or narrow gaps. In combination with the 360° flexibility, this results in particularly convenient handling. An additional coating on the ring provides effective protection against scratches.

Although an already fitted frame lock reliably locks the rear wheel, it does not prevent the bike from being carried away. The Superior plug-in chain is therefore the ideal addition for securely attaching the bike to fixed objects such as lamp posts or bike racks - for double security. The chain is simply placed around the object and inserted into the additional lock body of an ABUS frame lock or the Alarmbox 2.0. An additional key is not required - the frame lock key opens and locks both components.

The easy-grip fabric coating not only protects the frame from scratches, but also repels dirt and water. Thanks to three fashionable colours - Black, Metal Blue and Bike Packing - the connecting chain also creates visual accents on every ride. The high-quality feel of the materials also ensures pleasant handling.

The Superior connecting chain is available in two lengths: 100 cm and 130 cm. The 100 cm variant can be conveniently stowed in the ST 5950 2.0 and ST 5050 saddle bags.

Technologies

ADAPTOR CHAIN Superior 7KS/100 black

Seite 2 von 2

- 7 mm thick square chain made of specially hardened steel
- Oval loop ring in a new design for optimised grip and improved feel
- Fabric coating protects against scratches and paint damage
- 360° flexibility of the loop ring

Use and application

- Additional security lock for bikes with a frame lock or the Alarmbox 2.0
- Secures bikes and e-bikes
- For securing the bike to various objects such as bike racks, lamp posts or fences
- Offers flexibility when securing objects
- The adaptor chain is locked directly in the frame lock with the locking bolt so that no separate locking with a key is necessary
